ADMINISTRATIVELY CONFIDENTIAL

MEMORANDUM FOR

THE HONORABLE FREDERICK B. DENT
The Special Representative for Trade Negotiations

SUBJECT: Specialty Steel Import Case

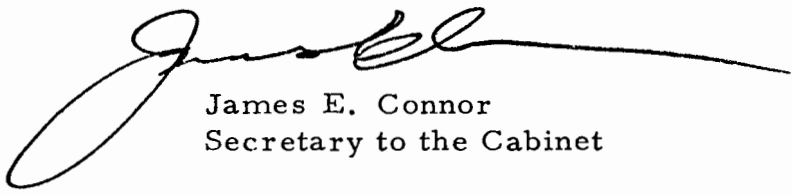

Confirming verbal advices to your office, the President reviewed your memorandum of March 1, 1976 on the above subject and approved the following:

OPTION III. On March 16, the President would announce:

- (1) that he would proclaim import quotas for a period of three years, effective from June 14, 1976 to June 13, 1979, comparable to the overall levels (but not the product category levels) of the first three years of the USITC recommended remedy (see Attachment A);
- (2) that during the following 90 days the United States would seek to negotiate orderly marketing agreements with exporting countries, which would better accommodate our mutual needs and which would be substituted for the intended import quotas; and
- (3) that under the Trade Act's authority, the President would, after taking into account advice received from the USITC, and the Secretaries of Labor and Commerce, reduce or terminate the import relief provided either in the form of quotas or under agreements, if due to improvements in the economic position of the domestic industry, he determined that it was in the national interest to do so.

The documents attached to your memorandum of March 1 to implement the President's decision are being prepared for the President's signature and you are requested to follow-up with any additional action that is necessary.

cc: L. William Seidman
Dick Cheney

James E. Connor
Secretary to the Cabinet

USITC Recommended Remedy

Quantitative restrictions would be imposed for five years, on the following basis:

<u>Product</u>	<u>1976</u>	<u>1977-1980</u>	
		(in short tons)	
		<u>Minimum</u>	<u>Maximum*</u>
Stainless Steel			
Sheet and Strip	79,000	73,100	13%
Plate	13,000	11,900	15%
Bar	19,600	19,600	13%
Rod	16,000	15,900	52%
Alloy tool steel	18,400	18,400	18%
TOTAL	146,000	138,900	

*Amount equal to specified percent of preceding year's apparent consumption.

THE PRESIDENT HAS SEEN....

OFFICE OF THE VICE PRESIDENT
WASHINGTON

March 12, 1976

MEMORANDUM FOR THE PRESIDENT

FROM: The Vice President *harr*
SUBJECT: Specialty Steel Import Case

I have reviewed the materials submitted to you on the specialty steel import case and concur that the issue narrows to a judgment on whether to:

-- announce three-year import quotas effective in 90 days (Option III),

or

-- announce that you will seek agreements with exporting countries over the next 90-day period and, in the absence of agreement, will provide import relief (which the materials call the Scowcroft alternative).

Although it is a tightly balanced judgment, I prefer the latter option for the following reasons:

1. It is a more flexible approach and does not overtly threaten our trading partners with a specific action.
2. There are signs that the Western European countries and Japan are beginning to follow our economic upswing.
 - Imposing quotas immediately will suggest that the United States is reverting to a protectionist position, and will induce a cycle of counterproductive protectionist and retaliatory actions.

-- Retarding the recovery of our free world trading partners could ultimately reflect back on our own economy, resulting in much greater unemployment.

3. Although many feel Congress would quickly override your action and impose a five-year quota, I do not believe that the affected groups or Congress will act if the broad aspects of the case are fully presented to the American people. Congress would be confronted by a reasonable request from you for time to bargain.

I note that a Wall Street Journal article this morning assessed that the impact of such a delaying action might not generate as severe repercussions as some predict. The writer argues that:

"Publicly the industry and United Steelworkers have adopted a seemingly inflexible stance....

Privately, however, there are indications that a compromise solution might be acceptable, if the President set a firm and not-too-distant date by which quotas would go into effect should efforts to negotiate voluntary reductions in imports fail."

RECOMMENDATION: That you not announce what type of import relief you will seek at the end of 90 days.

THE WHITE HOUSE
WASHINGTON

March 9, 1976

MEMORANDUM FOR RICHARD CHENEY

FROM:

WILLIAM GOROG *WBG*

SUBJECT:

Specialty Steel Case

Ambassador Dent called today and reemphasized the importance of an early Presidential decision if our action will be to accept the recommendation of the Trade Policy Committee. STR and State agree that a fast visit to Tokyo and Brussels would be in order prior to a public announcement. Such a visit would pave the way for establishing orderly marketing agreements and perhaps would forestall a bad initial response from Japan and the EC.

I have advised Ambassador Dent to make the necessary travel plans, and that we would attempt to expedite the decision.

THE WHITE HOUSE
WASHINGTON

March 6, 1976

MR PRESIDENT:

Specialty Steel Import Case

The attached memorandum from Ambassador Dent was staffed to members of the senior staff. Messrs. Marsh, Buchen, Cannon, Friedersdorf and Morton concur with Ambassador Dent's recommendation of Option III.

Max Friedersdorf adds the comment - "We have received a request for a meeting with the President by a number of Congressmen and Senators from Ohio, Pennsylvania, New York and West Virginia to discuss this subject."

Jim Cannon adds the comment - "It is troubling to note, however, that Attachment D - "Specialty Steel Case Background" indicates that "the specialty steel industry is suffering to a large extent from the domestic recession." Thus, it appears that the industry suffers primarily from cyclicity, not imports. This certainly throws into substantial question the USITC finding that the industry was seriously injured substantially due to increased imports."

Brent Scowcroft recommends still another alternate to the solutions stated in Ambassador Dent's memo. His comments are attached at Tab #1.

Should you select Option III, the necessary documents to implement your decision will be prepared for your signature.

Jim Connor

THE SPECIAL REPRESENTATIVE FOR
TRADE NEGOTIATIONS
WASHINGTON

1 MAR 1976

~~CONFIDENTIAL~~

MEMORANDUM FOR THE PRESIDENT

FROM : Frederick B. Dent, Chairman
Trade Policy Committee

SUBJECT: Decision Memorandum - Specialty Steel Import Case

On January 16, 1976, the U.S. International Trade Commission (USITC), in its first affirmative injury finding under the Trade Act of 1974, found that the industries producing certain stainless and tool steel were being seriously injured by imports. These industries produce approximately one and a half percent of total domestic steel tonnage.

Your determination of whether you will provide import relief for these industries must be published by March 16. If you determine that you will provide relief, you have the authority to impose tariff increases, tariff-rate quotas, or quotas, for up to a period of five years. Alternatively you can announce an intention to negotiate orderly marketing agreements, in which case import relief must be effective by June 14, 1976.

You also have the option of deciding that imposing import relief would be contrary to the national economic interest, and you can decide not to grant relief.

The USITC recommended the imposition of quotas for a five year period. (See Attachment A). You do not have to accept this recommendation, but must report to the Congress your reasons for taking a different action, and your decision would be subject to a potential Congressional override by a majority of those present and voting in both Houses. If the override resolution were voted, the Trade Act would require you to impose the USITC recommended quotas. After seeking the views of many interested Senators and Congressmen, I am of the opinion that if you decided to provide little or no import relief in this case, the chances for an override are very great.

- 2 -

I am setting forth below for your decision the options recommended by one or more agencies that participate in the Trade Policy Committee (see Attachment B for list of members) at a meeting held on February 27, 1976. This committee has the statutory responsibility to make recommendations to you on import relief actions that you may take. No agency recommended that you impose the USITC's suggested remedy of quotas for five years.

OPTION I: Deny relief on grounds of national economic interest, and seek unilateral, voluntary restraint on the part of foreign suppliers.

This option is proposed by the State Department. It is strongly opposed by the Justice Department. While this option may have the least impact on international trade relations, it is the consensus of the Trade Policy Committee that it will be overridden by the Congress, causing the imposition of the USITC's five years of relief.

OPTION I: Approve _____ Disapprove DR 7

OPTION II: Impose import quotas for basically two years, comparable to the overall level reached in 1975.

State and CEA recommend that, if Option I is not accepted, relief be provided for one year, with an automatic extension for a second year if conditions in the industry have not improved, and with a possible third year of relief provided, if it is determined at that time that conditions still have not improved. (Under the Trade Act, the President does have the authority, after seeking USITC advice, to extend relief for a maximum of an additional three years beyond the relief initially provided.) This option is proposed in view of the cyclical nature of the problem faced by the industry, and the impact on our international economic relations of a longer period of relief. The consensus of the other agencies is that while relief is only warranted for less than a five year period, there is an unacceptably high risk that limiting relief to a much shorter and indefinite period would be overridden by the Congress, resulting in mandatory imposition of the USITC quota relief for five years.

OPTION II: Approve _____ Disapprove DR 7

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

- 3 -

OPTION III. On March 16, the President would announce:

(1) that he would proclaim import quotas for a period of three years, effective from June 14, 1976 to June 13, 1979, comparable to the overall levels (but not the product category levels) of the first three years of the USITC recommended remedy (See Attachment A);

(2) that during the following 90 days the United States would seek to negotiate orderly marketing agreements with exporting countries, which would better accommodate our mutual needs and which would be substituted for the intended import quotas; and

(3) that under the Trade Act's authority, the President would, after taking into account advice received from the USITC, and the Secretaries of Labor and Commerce, reduce or terminate the import relief provided either in the form of quotas or under agreements, if due to improvements in the economic position of the domestic industry, he determined that it was in the national interest to do so.

Because of the cyclical nature of the industries' problem in periods of economic recession, namely over-capacity combined with increases in imports, the provision of import relief of long duration is felt by all agencies to be inappropriate. Therefore it has been recommended that any import relief would be terminated when there is a sufficient upswing in specialty steel production and employment.

Announcing on March 16 that orderly marketing agreements will be sought extends by 90 days the period for the imposition of import relief. This period will allow negotiations to take place which can take into account the trade interests of exporting countries, and attempt to avoid payment of compensation or possible retaliation.

This basic option is strongly supported by STR, Commerce, OMB, Labor, Treasury, Agriculture, the Acting Executive Director of the Council on International Economic Policy, and the Assistant to the President for Economic Affairs.

OPTION III: Approve RP7 Disapprove _____

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

- 4 -

Subsidiary Issues Involved in Option III

The quotas that are recommended are consistent with our international obligations under the GATT (General Agreement on Tariffs and Trade). However, the GATT also authorizes affected exporting countries to retaliate by increasing comparable restrictions on any U.S. exports. To avoid this result, the United States would generally offer compensation in the form of additional reductions in existing U.S. trade barriers on an amount of trade comparable to that of the steel imports adversely affected by the U.S. restrictions. This compensation exposes other U.S. industries to increased foreign competition to pay for the temporary relief granted to the specialty steel industry. Orderly marketing agreements are designed to avoid retaliation or the payment of compensation, by agreement of the affected parties. The motive for supplying countries entering into these agreements is to obtain more favorable treatment for their steel exports than would be obtained under quotas.

The Justice Department would prefer that the remedy be limited to the imposition of quotas, without the offer to negotiate agreements, due to the heavy concentration of this industry. The Department of Agriculture strongly urges the negotiation of orderly marketing agreements to limit the risk of retaliation against U.S. agricultural exports in response to U.S. unilateral import restraints on steel.

The Treasury Department proposed that quotas be proclaimed for two years, rather than three. Treasury further suggests, with CEA concurring, that the conditions for terminating the import relief be stressed in the President's March 16 announcement. The Labor Department suggests that these conditions receive little emphasis, and prefers that these conditions not be made a part of this option. The attached draft press release does indicate conditions for terminating the import relief.

STR and Commerce strongly recommend that you announce that any orderly marketing agreements entered into would be terminated upon negotiation of a steel sector agreement (described in Attachment C). The Trade Act stipulates that articles governed by import relief actions are to be exempted from trade liberalization in the Multilateral Trade Negotiations. Unless a termination clause (related to progress in the Multilateral Trade Negotiations) is built into the orderly marketing agreements, there cannot be trade liberalization for the products covered.

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

- 5 -

The State Department suggests that consultations be held with Japan and the EC prior to presentation of a recommendation to you for the negotiation of agreements. This was not possible due to the lack of time, but the Committee recommended that these consultations be held after your decision and prior to March 16, if feasible, if you choose Option III. I also strongly recommend that consultations on specialty steel be held in the OECD as soon as possible after bilateral consultations are held. All of these consultations would precede, and be preparatory to, the negotiation of orderly marketing agreements.

Finally, you have the authority to order the Secretary of Labor to expedite his processing of trade adjustment assistance petitions, to assist the large number of unemployed specialty steel workers. About 3400 workers of 8500 laid off are already eligible for such assistance. I recommend that you issue such an order in this case.

Attached for your information is a background paper on the specialty steel industry, a draft press release and Federal Register notice for Option III, and letters notifying the Congress of your decision (if Option III). If you choose either Option II or III, I will prepare any other necessary implementing documents, and convene an interagency group to devise a quota allocation scheme and, in the case of Option III, a negotiating plan for the orderly marketing agreements.

Trade Policy Committee

The Trade Policy Committee is established by Section 242 of the Trade Expansion Act of 1962, as amended. Its membership is designated by Executive Order 11846 of March 27, 1975. These members are:

- (1) The Special Representative, Chairman
- (2) The Secretary of State
- (3) The Secretary of the Treasury
- (4) The Secretary of Defense
- (5) The Attorney General
- (6) The Secretary of the Interior
- (7) The Secretary of Agriculture
- (8) The Secretary of Commerce
- (9) The Secretary of Labor
- (10) The Assistant to the President for Economic Affairs
- (11) The Executive Director of the Council on International Economic Policy

Pursuant to the Trade Expansion Act the Trade Policy Committee is required to make recommendations to the President as to what action, if any, he should take on reports with respect to import relief submitted to him by the U.S. International Trade Commission.

STEEL SECTOR NEGOTIATIONS

The United States is currently preparing for a steel sector negotiation in the MTN by pressing for analyses of steel and several other product sectors. Progress has been slow towards negotiations on a sector basis and little in the way of concrete results can be expected during 1976 absent high-level agreement to move forward more quickly.

It would be to the advantage of the United States, and the other major steel trading countries, to avoid the unilateral imposition of import restrictions or bilateral restraint agreements which do not take into account the interests of others. It would therefore be useful to expedite a steel sector negotiation to arrive at an agreed international approach to steel problems at the earliest possible time. A steel sector negotiation need not set a pattern for carving the MTN into numerous sector negotiations. Steel trade is characterized by cyclical decreases in demand and resulting excess capacity as well as by pervasive government intervention in the form of ownership and subsidization.

The basic thrust of the international steel agreement that we would seek would be trade liberalization with steel tariffs and nontariff barriers substantially reduced or eliminated. One of the key NTBs to be dealt with should be subsidization, with the results incorporated in the MTN subsidies code. Provisions could also be incorporated governing the application of export restrictions on raw materials and steel scrap, and the allocation of steel supplies in times of shortage. A committee could be provided to monitor developments in steel trade and to provide a forum for multilateral consultations under the agreement.

Recognizing the special cyclical nature of problems of trade in steel, the relationship of steel to national defense, and the necessity for stable market conditions for long-range investment planning, the agreement could contain a safeguard clause separate from GATT Article XIX. Particularly during periods of recession, the clause could allow the temporary imposition of import restrictions to avoid sharp and substantial increases in market penetration through price-cutting, especially where government intervention was distorting normal competitive relationships. To avoid the agreement leading to the imposition of unwarranted restrictions, internationally-agreed constraints on trade measures would be necessary. These could include the following:

(a) Import restrictions could only be applied where there was substantial domestic capacity to meet domestic demand at reasonable prices, and would call for a national judgment that substantially increased imports would damage the domestic industry. Factors that would be taken into account could be under-utilization of capacity, unemployment or under-employment, depressed sales and profits, planned capacity and investment, etc.

(b) Restrictions could not be used to cut back imports beyond their level during the most recent two or three year period.

(c) There could be a requirement of international justification of restrictions before the surveillance committee (with or without prior international approval of restraints).

(d) The duration of the restraints could be limited to one initial period, followed by one renewal period. Further restraints might require international approval, be subject to an international veto, or be subject to payment of compensation.

The United States would submit a steel agreement of this kind to Congress for approval of implementing legislation under the NTB procedures of Trade Act sections 102 and 107.

SPECIALTY STEEL CASE BACKGROUND

Specialty steel imports amounted to nearly \$200 million in 1975. This represented a nearly two-fold increase compared with 1970 imports of about \$110 million.

In tonnage terms, imports of stainless and alloy tool steel in 1975 were the second highest level since 1968. Import penetration rates were about 20% in 1970, 1971, and 1975, substantially higher than for the intervening years.

Domestic production and shipments more than doubled from 1970 to 1974. However, in 1975, a decline of roughly 45% occurred. Employment trends over the last several years have also been generally upward. However, in 1975, approximately 8500 workers were in lay-off status representing approximately 25% of the industry's work force.

The specialty steel industry is geographically concentrated in the eastern half of the United States with the largest number of plants located in Pennsylvania. Substantial production also is found in New York, Ohio, Maryland, Michigan and Indiana. Pennsylvania in particular has been hard hit by cut-backs in domestic shipments.

The specialty steel industry is suffering to a large extent from the domestic recession and is expected to recover substantially as the domestic economy recovers. Long-run prospects for the U.S. market appear favorable with a higher growth rate likely than for carbon steel products. Further, the domestic industry appears to be cost competitive with Japan and the EC, the principal sources of imports aside from Sweden. A major question mark on the horizon is Korea which has purchased a large specialty steel facility from the U.S. and plans to begin production in late 1976, which could lead to exports to the U.S. market amounting to roughly 1/5 total U.S. imports.

The USITC case involves only specialty steel and not the much larger carbon steel industry. Specialty steel imports account for only 5% of U.S. steel imports by value and 1% in tonnage terms. However, the entire steel industry suffers from similar problems, cyclical swings in demand resulting in excess capacity in periods of recession, aggravated by governmental actions abroad. While the impact on domestic specialty steel production has been much sharper than with respect to carbon steel, the effect on the whole steel industry has been substantial.

The specialty steel industry has urged the U.S. Government for many years to grant protection against import competition. Such pressure in 1971 led to negotiation of stainless steel subceilings under the steel voluntary restraint agreements (VRAs) with Japan and the European Community. Experience under those restraints indicates that Japan did not fill the levels allocated--probably due to high demand in other world markets--and that the EC probably exceeded the levels provided for under the VRA.

Attached is a detailed interagency paper on specialty steel if further information is required.

B

Trade Policy Committee

The Trade Policy Committee is established by Section 242 of the Trade Expansion Act of 1962, as amended. Its membership is designated by Executive Order 11846 of March 27, 1975. These members are:

- (1) The Special Representative, Chairman
- (2) The Secretary of State
- (3) The Secretary of the Treasury
- (4) The Secretary of Defense
- (5) The Attorney General
- (6) The Secretary of the Interior
- (7) The Secretary of Agriculture
- (8) The Secretary of Commerce
- (9) The Secretary of Labor
- (10) The Assistant to the President for Economic Affairs
- (11) The Executive Director of the Council on International Economic Policy

Pursuant to the Trade Expansion Act the Trade Policy Committee is required to make recommendations to the President as to what action, if any, he should take on reports with respect to import relief submitted to him by the U.S. International Trade Commission.

C

STEEL SECTOR NEGOTIATIONS

The United States is currently preparing for a steel sector negotiation in the MTN by pressing for analyses of steel and several other product sectors. Progress has been slow towards negotiations on a sector basis and little in the way of concrete results can be expected during 1976 absent high-level agreement to move forward more quickly.

It would be to the advantage of the United States, and the other major steel trading countries, to avoid the unilateral imposition of import restrictions or bilateral restraint agreements which do not take into account the interests of others. It would therefore be useful to expedite a steel sector negotiation to arrive at an agreed international approach to steel problems at the earliest possible time. A steel sector negotiation need not set a pattern for carving the MTN into numerous sector negotiations. Steel trade is characterized by cyclical decreases in demand and resulting excess capacity as well as by pervasive government intervention in the form of ownership and subsidization.

The basic thrust of the international steel agreement that we would seek would be trade liberalization with steel tariffs and nontariff barriers substantially reduced or eliminated. One of the key NTBs to be dealt with should be subsidization, with the results incorporated in the MTN subsidies code. Provisions could also be incorporated governing the application of export restrictions on raw materials and steel scrap, and the allocation of steel supplies in times of shortage. A committee could be provided to monitor developments in steel trade and to provide a forum for multilateral consultations under the agreement.

Recognizing the special cyclical nature of problems of trade in steel, the relationship of steel to national defense, and the necessity for stable market conditions for long-range investment planning, the agreement could contain a safeguard clause separate from GATT Article XIX. Particularly during periods of recession, the clause could allow the temporary imposition of import restrictions to avoid sharp and substantial increases in market penetration through price-cutting, especially where government intervention was distorting normal competitive relationships. To avoid the agreement leading to the imposition of unwarranted restrictions, internationally-agreed constraints on trade measures would be necessary. These could include the following:

(a) Import restrictions could only be applied where there was substantial domestic capacity to meet domestic demand at reasonable prices, and would call for a national judgment that substantially increased imports would damage the domestic industry. Factors that would be taken into account could be under-utilization of capacity, unemployment or under-employment, depressed sales and profits, planned capacity and investment, etc.

(b) Restrictions could not be used to cut back imports beyond their level during the most recent two or three year period.

(c) There could be a requirement of international justification of restrictions before the surveillance committee (with or without prior international approval of restraints).

(d) The duration of the restraints could be limited to one initial period, followed by one renewal period. Further restraints might require international approval, be subject to an international veto, or be subject to payment of compensation.

The United States would submit a steel agreement of this kind to Congress for approval of implementing legislation under the NTB procedures of Trade Act sections 102 and 107.

SPECIALTY STEEL CASE BACKGROUND

Specialty steel imports amounted to nearly \$200 million in 1975. This represented a nearly two-fold increase compared with 1970 imports of about \$110 million.

In tonnage terms, imports of stainless and alloy tool steel in 1975 were the second highest level since 1968. Import penetration rates were about 20% in 1970, 1971, and 1975, substantially higher than for the intervening years.

Domestic production and shipments more than doubled from 1970 to 1974. However, in 1975, a decline of roughly 45% occurred. Employment trends over the last several years have also been generally upward. However, in 1975, approximately 8500 workers were in lay-off status representing approximately 25% of the industry's work force.

The specialty steel industry is geographically concentrated in the eastern half of the United States with the largest number of plants located in Pennsylvania. Substantial production also is found in New York, Ohio, Maryland, Michigan and Indiana. Pennsylvania in particular has been hard hit by cut-backs in domestic shipments.

The specialty steel industry is suffering to a large extent from the domestic recession and is expected to recover substantially as the domestic economy recovers. Long-run prospects for the U.S. market appear favorable with a higher growth rate likely than for carbon steel products. Further, the domestic industry appears to be cost competitive with Japan and the EC, the principal sources of imports aside from Sweden. A major question mark on the horizon is Korea which has purchased a large specialty steel facility from the U.S. and plans to begin production in late 1976, which could lead to exports to the U.S. market amounting to roughly 1/5 total U.S. imports.

The USITC case involves only specialty steel and not the much larger carbon steel industry. Specialty steel imports account for only 5% of U.S. steel imports by value and 1% in tonnage terms. However, the entire steel industry suffers from similar problems, cyclical swings in demand resulting in excess capacity in periods of recession, aggravated by governmental actions abroad. While the impact on domestic specialty steel production has been much sharper than with respect to carbon steel, the effect on the whole steel industry has been substantial.

The specialty steel industry has urged the U.S. Government for many years to grant protection against import competition. Such pressure in 1971 led to negotiation of stainless steel subceilings under the steel voluntary restraint agreements (VRAs) with Japan and the European Community. Experience under those restraints indicates that Japan did not fill the levels allocated--probably due to high demand in other world markets--and that the EC probably exceeded the levels provided for under the VRA.

Attached is a detailed interagency paper on specialty steel if further information is required.

3. Modified Quantitative Restrictions
4. Orderly Marketing Agreements
5. Tariff Increases or Tariff Rate Quotas
6. Adjustment Assistance
7. No Relief

1 PROBLEM

2 On January 16, 1976, the International Trade Commission
3 (ITC) issued a report containing an affirmative finding, under
4 Section 201(b) of the Trade Act of 1974, that increased imports
5 have been a substantial cause of serious injury or threat
6 thereof to domestic producers of bars; wire rods; and plates,
7 sheets, and strip, not cast, not pressed, and not stamped to
8 nonrectangular shape; all of the foregoing of stainless steel
9 or alloy tool steel. The President has 60 days after receiv-
10 ing the ITC report (until March 16) to:

11 determine what method and amount of import relief he
12 will provide or determine that the provision of such
13 relief is not in the national economic interest of the
14 United States and whether he will direct expeditious
15 consideration of adjustment assistance petitions and
16 publish in the Federal Register that he has made such
17 determination - Sec. 202 (b) (1).

18 In reaching his determination the President must take
19 into account nine considerations specified in Section 202(c)
20 of the Trade Act as well as such other considerations as he
21 may deem relevant.

22 Under the Trade Act the President has nine basic options to
23 choose among and announce publically by March 16:

- 24 (1) Proclaim the ITC's proposed remedy.
- 25 (2) Proclaim imposition of quantitative restrictions
26 differing from those the ITC proposes.
- 27 (3) Negotiate an orderly marketing agreement (OMA) with
28 foreign countries limiting their exports to the U.S.
- 29 (4) Proclaim an increase in duties.
- 30 (5) Proclaim a tariff rate quota (i.e., higher tariffs
31 on imports in excess of specified quotas).
- 32 (6) Any combination of actions (2) through (6) above.

1 (7) Actions (1) and (6) combined.

2 (8) Determine that import relief is not in the national
3 economic interest and announce what other steps he
4 is taking to help the industry overcome serious
5 injury and the workers to find productive employment.

6 (9) Order expedited adjustment assistance (can be ordered
7 in conjunction with any of the above options).

8 Import relief must take effect within 15 days after a deter-
9 mination is reached, unless a decision is made to negotiate
10 an orderly marketing agreement, in which import relief must
11 take effect within 90 days.

12 If the action taken by the President differs from the ITC
13 recommendation, the House and Senate may by an affirmative vote
14 of a majority of both houses within 90 working days, disapprove
15 the President's decision and force implementation of the ITC
16 recommendations.

17 The TPSC is charged with initiating recommendations for the
18 President. The Special Representative has set a deadline of
19 March 2 to transmit recommendations and accompanying documenta-
20 tion to the President.

21 RECOMMENDATIONS

22 DISCUSSION

23 ITC Report

24 The Commission's determination is based on affirmative
25 determinations by three Commissioners on all of the products
26 indicated and an affirmative determination by one Commissioner
27 with respect to stainless steel bars and wire rods and alloy
28 tool steel in all forms (who determined in the negative on
29 stainless steel plates, sheets and strip). A fifth Commissioner
30 determined in the negative on all products under investigation
31 and the sixth Commissioner abstained. A negative determination
32 was made by five Commissioners with respect to one product
33 category under investigation -- ingots, blooms, billets, slabs,

1 and sheet bars.

2 The individual Commissioners reflected differences in the
3 definition of what constituted an industry, the time period
4 analyzed, the criteria applied, and the conclusions reached.
5 Among the differences with respect to key questions are the
6 following:

7 Industry Definition - Two Commissioners found four identifiable
8 domestic industries producing articles comparable to those under
9 investigation. Three Commissioners (including one finding in
10 the negative) determined that there was only one industry pro-
11 ducing all of these articles.

12 Increased Imports - Three Commissioners used 1964 to 1975 (9
13 mos.) import trends in reaching their findings. One Commissioner
14 used 1968 to 1975 (9 mos.) and found affirmatively on all prod-
15 ucts except stainless steel sheet and strip. The other partici-
16 pating Commissioner used 1970 to 1975 (6 mos.) and found no
17 increase in imports for the products investigated (as a whole).

18 Injury or Threat of Injury - All four Commissioners analyzing
19 this question use 1970 to 1975 (9 mos.) as a base period. Two
20 Commissioners found both injury and threat of injury for all
21 products on the basis of factors such as low capacity utiliza-
22 tion and profitability; high unemployment; high importer inven-
23 tories; and unused capacity abroad. One Commissioner found
24 serious injury on similar grounds for all products except stain-
25 less steel plate where he found threat of serious injury due to
26 a decreasing domestic market share, widening price gap between
27 domestic and foreign products and large unused capacity abroad.

1 The remaining Commissioner considered only profitability in
2 determining serious injury. He found injury for all products
3 except stainless steel plate where he found no injury. He did
4 not consider sheet and strip because of an earlier finding of
5 no increased imports.

6 Imports a Substantial Cause of Injury - Two Commissioners deter-
7 mined substantial cause affirmatively for all products based on
8 the 1970 to 1975 (9 mos.) time period. One Commissioner joined
9 them on stainless steel plates using the same period; used
10 1973-1975 (9 mos.) in analyzing stainless steel sheet and strip,
11 and found affirmatively on all other products using the 1964 to
12 1975 (9 mos.) period. The fourth Commissioner found affirmatively
13 using the 1964 to 1975 (9 mos.) period for stainless steel bar
14 and rod and alloy tool steel.

15 The Commission recommended imposition of quantitative
16 restrictions on imports for the next five years to prevent or
17 remedy injury. Four Commissioners voted for the remedy, includ-
18 ing one who had found only stainless steel bar and rod and alloy
19 tool steel to meet the requirements for import relief. The
20 quantitative restrictions recommended are as follows:

<u>Product</u>	<u>1976</u> (in short tons)	<u>1977-1980</u>	
		<u>Minimum</u>	<u>Maximum*</u>
Stainless Steel			
Sheet and Strip	79,000	73,100	13%
Plate	13,000	11,900	15%
Bar	19,600	19,600	13%
Rod	16,000	15,900	52%
Alloy tool steel	18,400	18,400	18%
TOTAL	146,000	138,900	

31 *Amount equal to specified percent of preceding year's
32 apparent consumption.

1 Quotas would be allocated to supplier countries on the basis
2 of their average annual market share during the period 1972 to
3 1974. Countries that do not fulfill their quotas in a particu-
4 lar year lose that portion of the quota in the following year
5 and the difference is reallocated to all other countries.

6 Products and Their Uses

7 The product categories on which affirmative ITC determina-
8 tions were reached encompass more than 1,000 clearly identifi-
9 able products which are used in a wide variety of applications.

10 Stainless steel is an alloy steel containing, by weight,
11 less than one percent of carbon and over 11.5 percent of chromium.
12 Tool steel is alloy steel containing any of five combinations,
13 by weight, of chromium, carbon, molybdenum and/or tungsten.

14 Stainless steel sheets are used in manufacturing chemical
15 fertilizer and liquid gas storage tanks and food processing and
16 hospital equipment. Plates are used in the manufacture of equip-
17 ment for the chemical processing, petroleum refining, textile,
18 paper and industrial heating industries. Strip finds application
19 in a multitude of products such as catalytic convertors, auto-
20 motive trim, and appliances. Bars also are widely used for pump
21 shafts, bearings, fasteners, medical and surgical instruments,
22 and aircraft landing gear components. Wire rod is used by pro-
23 ducers or sold to convertors to be drawn into wire.

24 Tool steel is produced principally in the form of bars and
25 rods and is used primarily to make tools (e.g., shears, drills,
26 dies, chisels) capable of cutting, forming or otherwise shaping
27 materials. The major markets are independent tool producers and
28

1 captive tool producers of automotive and farm equipment compan-
2 ies. Tool steels are typically made in small lots with very
3 high quality control levels.

4 U.S. Tariffs

5 The imported stainless steel and tool steel articles covered
6 by the Commission's affirmative determination are classified
7 under eight TSUS items and include 21 complete TSUSA items as
8 well as a small portion of seven additional TSUSA "basket" items.*
9 All products are subject to a basic rate of duty plus an addi-
10 tional duty on alloy content as shown in the tabulation below.
11 The ITC has estimated that the duty on alloy content in all cases
12 adds less than one percent ad valorem to the duties paid.

13 (Cents per pound; percent ad valorem)

	Col. 1 rate applicable		Col. 2 rate
	on Dec. 31 --		
	1967 <u>1/</u>	1975 <u>1/</u>	
17 Bars (608.54)	14.5%	10.5%	28%
18 Wire Rods:			
19 Not tempered, treated, or partly manufactured (608.76)	0.25¢+4%	0.25¢+4% <u>2/</u>	0.6¢+8%
20 Other (608.78)	0.375¢+4%	0.375¢+4% <u>3/</u>	0.85¢+8%
21 Plates and Sheets:			
Not pickled or cold rolled (608.85)	12%	9.5%	28%
22 Other (608.88)	0.1¢+12%	10%	0/2¢+28%
23 Strip, in thickness --			
Not over 0.01 inch (609.06)	10%	8%	33%
24 Over 0.01, but not over 0.05 inch (609,07)	12.5%	10.5%	33%
25 Over 0.05 inch (609.08)	13.5%	11.5%	33%

26 1/ Imports are also subject to duty on alloy content as follows (in
27 cents per pound):

28 * All of the partial items included are alloy tool steel. The
29 ITC estimated that about six percent of alloy tool steel imports
30 enter under these codes.

December 31 --
1967 1975

3	Chromium content in excess of 0.2		
4	percent (607.01)	1.5¢	0.75¢
5	Molybdenum content in excess of 0.1		
6	percent (607.02)	35¢	17.5¢
7	Tungsten content in excess of		
8	0.3 percent (607.03)	50¢	25¢
9	Vanadium content in excess of 0.1		
10	percent (607.04)	40¢	20¢

11 2/ Ad valorem equivalent for 1974 was 5.6%

12 3/ Ad valorem equivalent for 1974 was 5.1%

12 Most of the rates of duty applicable to products covered by the

13 ITC findings were reduced pursuant to the Kennedy Round negotia-

14 tions. In the case of wire rods (stainless and tool steel), no

15 reductions were made.

16 Imports Trends and Sources

17 Import trends for the products covered by the affirmative

18 ITC decision are summarized on the following page for the last

19 eight years:

(in thousands tons)

24 Year (s)	22 Stainless steel					23 Alloy tool steel*	21 Stainless and Alloy tool steel
	23 Sheet and Strip	Plate	Bar	Rod	Total		
25 1968	81.3	5.2	12.6	15.9	115.0	13.5	128.5
26 1969	78.7	7.2	12.6	14.9	113.4	14.7	128.1
27 1970	88.8	8.3	15.2	13.9	126.2	17.3	143.5
28 1971	107.2	10.3	16.2	13.4	147.1	12.6	159.7
29 1972	59.6	17.1	18.5	13.0	108.2	14.8	123.0
30 1973	44.7	11.3	20.1	16.8	92.9	23.1	116.0
31 1974	64.9	12.4	27.9	22.1	127.3	23.9	151.2
32 1975	65.5	17.6	29.2	16.9	129.2	24.2	153.4
33 Averages							
34 1970-74	73.0	11.9	19.6	15.8	120.3	18.4	138.7
35 1970-75	71.7	12.9	21.2	16.0	121.8	19.0	140.8
36 1972-74(VRA)	56.4	13.6	22.2	17.3	109.5	20.6	130.1

1	1975 as							
2	Percentage							
3	of							
4	<u>1974</u>	100.9%	141.9%	104.7%	76.5%	101.5%	101.3%	101.5%
5	Highest	61.1	100.0	100.0	76.4	87.8	100.0	96.1
6	year							
7	Lowest	146.5	338.4	231.7	130.0	139.1	192.1	132.2
8	year							

9 * Understated by approximately 6 percent due to exclusion of alloy
10 tool steel imports not separately identifiable.

11 For three of the categories -- stainless steel plate and bar and
12 alloy tool steel -- 1975 imports were the highest ever but for
13 stainless sheet and strip, which is the largest volume category,
14 imports were considerably lower than 1968-71 levels and stainless
15 rod imports fell off sharply from their 1974 peak. Only stain-
16 less steel bar imports have increased steadily throughout the
17 period -- other categories have been up and down. Comparing 1974
18 and 1975, the only notable volume shifts were a 42 percent increase
19 in stainless steel plate and a 23.5 percent decrease in stainless
20 steel rod imports. Quarterly import trends during 1975 were
21 characterized by sharp declines from the first to second quarter;
22 smaller declines between the second and third quarters and third
23 and fourth quarters (except for an increase in plate in the third
24 quarter and an increase in sheet and strip in the fourth quarter).
25 Imports in the second half of 1975 were 25 percent less than in
26 the first half (an annual rate of 134,000 tons).

27 A substantial value of trade is involved in this ITC deci-
28 sion. The value of imports averaged about \$130 million annually
29 for 1970-74. 1974 imports hit \$177 million and 1975 imports were
30 \$198 million.

1 The principal foreign supplier of stainless steel sheet,
2 strip, plate, bar, and rod in the U.S. market is Japan. In the
3 first nine months of 1975 Japan's share of U.S. imports was in
4 excess of 50 percent for all product categories. This is significantl
5 higher than during the 1972-74 period when the Voluntary Restraint
6 Agreement (VRA), which included a subceiling on specialty steel pro-
6a ducts, was in effect and world demand was generally high. Japan did
7 not export as much stainless steel to the U.S. market as was permitted
7a under the VRA. Japan's 1975 import share is compar-
8 able to that achieved in 1970 and 1971 -- which reflected the
9 effects of the original 1969-71 VRA that did not contain specific
10 stainless steel quotas and thus encouraged a Japanese shift from
11 carbon steel into higher value stainless steel exports to the
12 United States.

13 Several EC countries -- particularly France, the U.K., Germ-
14 any, and Belgium -- are significant suppliers in the U.S. stain-
15 less steel market, accounting for about one-sixth of U.S. imports
16 for nine months of 1975. The EC also participated in the VRA,
17 however, in contrast to Japan, the EC's market share in 1975 was
18 substantially less than during the 1972-74 period, although com-
19 parable to 1970 and 1971 shares (indicating the VRA had little effect)
20 The French position in particular has eroded steadily from a high point
21 of 17 percent of 1972 U.S. imports to 7.2 percent in 1975.

22 The other notable suppliers of U.S. imports are Sweden
23 (about 11 percent of the total for nine months of 1975), Canada
24 (ten percent), Spain (four percent), Brazil (one percent), and
25 Korea (one percent). All other suppliers together represent less
26 than two percent of U.S. imports.

27 Alloy tool steel imports come primarily from Sweden which
28

1 has accounted for about 40 percent of the total for the last four
2 years. Japan was the second largest supplier in 1975 with about
3 20 percent of the total, up sharply from 1974 but comparable to
4 its 1971 and 1972 shares. Austria and Germany each supply about
5 ten percent of U.S. imports, however, Germany's share represents
6 an increase over its share in the early 1970's while Austria's
7 share has been generally in a range of 10-13 percent. Smaller
8 suppliers include Canada, Spain, the U.K., Poland, and Finland.

9 For the first nine months of 1975 imports of speciality
10 steels from Japan increased by more than the total increase from
11 the comparable 1974 period. Thus Japan's increase accounts for
12 the fact that imports did not share in the sharp 1975 consumption
13 decline in the U.S. market. During the same period, EC sources
14 generally increased their exports to the U.S. but French exports
15 dropped substantially. Imports were up from Sweden and Korea;
16 stable from Austria and Brazil; and down from Canada.

17 Import Penetration

18 The ratio of imports to U.S. apparent consumption increased
19 from insignificant levels in the early 1960's to quite substantial
20 levels in 1970 and 1971. For stainless steel sheet, strip, plate,
21 and rod the ratio declined sharply from 1970 to 1974 while
22 stainless steel bar and alloy tool steel import penetration ratios
23 rose slightly. In 1975, imports remained stable as domestic
24 shipments and exports declined sharply, so import penetration
25 ratios increased for all categories. As the year progressed,
26 however, and imports stabilized at lower levels while shipments
27 began to recover, import penetration ratios either stabilized or

1 began to decline. With the exception of stainless sheet, strip,
2 and plate, import penetration ratios during the first three
3 quarters of 1975 were higher than for any recent annual period.

4 Import penetration ratio data are summarized below:

	<u>1964*</u>	<u>1970</u>	<u>1974</u>	<u>1975</u> (9 mos)
5 Stainless steel				
6 Sheet & Strip	NA	21.1	7.9	15.6
7 Plate	1.3	12.9	8.9	14.0
8 Bar	2.1	13.1	15.0	23.1
9 Rod	40.3	57.0	48.0	69.8
10 Alloy Tool Steel	8.3	17.9	19.3	27.5

11 *Industry data -- not exactly comparable to later years.

12
13 In value terms, the rate of import penetration in the first nine
14 months of 1975 was about 16 percent and in 1974 less than ten
15 percent. For comparative purposes, the import penetration ratio
16 for the goods producing sector of the U.S. economy was about 14.5 per-
17 cent in 1975.

18
19 There is no evidence that any significant share of imports
20 represents noncompetitive products. There are a couple of minor
21 exceptions -- razor blade steel and flapper valve steel. The ITC
22 estimated razor blade steel imports (under the strip category)
23 at 500 tons valued at \$1 million annually. All major U.S. razor
24 blade producers have indicated that razor blade steel is not
25 available from domestic sources.

26 Geographic Concentration of Imports

27 Imports of stainless steel are distributed unevenly among
28 all the major customs regions. The Atlantic Coast received
29 nearly 60 percent of total stainless receipts in 1974. As shown
30 on the next page, the New York customs district accounted for

30 percent of total stainless steel imports. The following table presents total stainless steel imports according to major regions with the most important customs districts indicated.

U.S. Imports of Stainless Steel
by Major Geographic Region (1,000 net tons)*

		<u>% of Total</u>
Total	176	100.0%
1. Atlantic Coast	106	59.1%
New York	53	30.1%
Philadelphia	22	12.5%
Baltimore	16	9.1%
2. Gulf Coast-Mexican Border	11	6.3%
Houston	8	4.5%
3. Pacific Coast	22	12.5%
Los Angeles	18	10.2%
4. Great Lakes-Canadian Border	39	22.2%
Chicago	16	9.1%
Ogdensburg, New York	12	6.8%
5. Off-Shore	1	0.6%

* Includes some products not covered by ITC finding.

Domestic Producers

Domestic producers of the products covered by the ITC decision produce a variety of other products such as silicon electrical steels, superalloys, and exotic metals which account for about 30 percent of the sales of plants producing stainless and alloy tool steels. For individual plants, these products may represent as much as 80 to 85 percent of sales.

Twenty companies produce alloy tool and stainless steel -- nine producing only stainless steel, five producing alloy tool steel, and six producing both. Operations are conducted at about 40 plants, 20 of which are in Pennsylvania (including 12 around

1 Pittsburgh), five in Ohio, and four in New York. The other plants
2 are scattered through Connecticut, Maryland, Michigan, Indiana,
3 and Illinois, with none further west than Illinois.

4 Most producers manufacture more than one of the types of
5 products under consideration, often at the same plant. Stain-
6 less sheet and strip and plate are normally produced on different
7 rolling mills. Bar and rod are normally produced at different
8 facilities from sheet, strip or plate. With some modifications,
9 both stainless and alloy tool steel bar and rod may be manufac-
10 tured at the same facility.

11 The two largest firms in stainless steel by far are
12 Allegheny-Ludlum and Crucible Specialty Metals.

13 Bethlehem Steel is the largest domestic
14 alloy tool steel producer. Five of the 20 producers are also
15 large carbon steel producers for whom stainless and alloy tool
16 steel represent an insignificant portion of total company sales.
17 Together they account for one third of domestic stainless and
18 alloy tool steel shipments.

19 For individual product categories, a few firms typically
20 account for a preponderance of sales as follows:

<u>Product</u>	<u>Largest Producers</u>	
	<u>Number</u>	<u>% of Domestic Shipments</u>
Stainless steel:		
Sheet and strip	4	62
Plate	3	67
Bar	4	65
Rod	5	100
Alloy tool steel	4	58

1 Production, Shipments, and Exports

2 Domestic production increased in each year from 1970, a
3 recession year, to hit an all time peak in 1974. The recession
4 beginning in 1974 resulted in sharp cutbacks in production in
5 1975. For the first nine months of 1975, compared with the same
6 1974 period, production of stainless sheet and strip and rod fell
7 more than 50 percent, while plates, bars, and alloy tool steel
8 were off by 25-50 percent.

9 The value of domestic shipments of products covered by the
10 ITC finding was \$2 billion in 1974 reflecting a doubling of sales
11 since 1971. Shipments in 1975 for nine months were \$975 million
12 reflecting substantial tonnage declines and lower selling prices
13 than in 1974.

14 Generally, production and shipments are comparable and move
15 in a similar fashion. The major exception is wire rods where
16 more than half of domestic production is captively consumed in
17 wire drawing.

18 Shipments trends for 1970-74, according to ITC data, were
19 similar to those for production (see table on following page).
20 Annual data from the American Iron and Steel Institute (AISI)
21 indicate sharp shipment declines in 1975 for all product categor-
22 ies including a 60 percent decline in stainless rod shipments,
23 49 percent for sheet and strip, 41 percent for bars, 39 percent
24 for alloy tool steel, and 29 percent for plate (Annual 1975 data
25 are not available from ITC). In tonnage terms the 1974 to 1975
26 drop was about 590 thousand tons overall. Imports rose by two
27 thousand tons between those years. Total imports in 1975

Item and period	U.S. producer shipments	Exports	Imports	Apparent consumption	Ratio imports to consumption
	Tons	Tons	Tons	Tons	Percent

1975	518,628	34,649	120,453	604,435	19.9

1 (153 thousand tons) were roughly one-fourth the magnitude of the
2 decline in domestic producer shipments from 1974 to 1975 (approx-
3 mately 590 thousand tons).

4 Exports represent a small proportion of U.S. producer ship-
5 ments ranging from 4-8 percent in 1974 depending on the product
6 category. In the early 1960's the U.S. was a net exporter but
7 became a net importer in the late 1960's. In recent years, U.S.
8 exports of stainless and alloy tool steel products have approached
9 the level of U.S. imports. In 1973 and 1974, stainless sheet
10 and strip exports actually exceeded imports. In all other cate-
11 gories, the U.S. has consistently run a significant trade deficit
12 in recent years. With the general world recession in 1975 U.S.
13 exports dropped off sharply particularly for stainless sheets and
14 strips, plates, and rods. The tonnage decline in exports (70,000
15 tons) from 1974 to 1975 was equivalent to 12 percent of the
16 decline in U.S. producer shipments as reported by AISI.

17 Major U.S. export markets include Canada, Belgium, the U.K.,
18 Brazil, and Germany -- all of which are exporters in some volume
19 to the U.S. market. Other large U.S. markets are Taiwan, Australia,
20 Italy, and Venezuela.

21 Employment

22 Employment attributed to production of covered stainless
23 and alloy tool steel products increased steadily from 1971 to
24 1974 (by more than 25 percent) but fell in 1975 to below 1971
25 levels.

(000 persons)
1970 1971 1972 1973 1974 1975 (9mos.)

All employees attributed to stainless and alloy steel production* 27.6 25.6 26.0 30.2 32.5 22.9

Production workers attributed to stainless and alloy steel production* 21.1 19.4 20.4 24.4 26.2 17.2

* Includes a small number of employees engaged in producing other products for one company.

The principal impact of the recent decline has been on production workers which averaged 26,200 in 1974 but only 17,200 for the first nine months of 1975--a drop of 35 percent.

There have been two significant contractions of stainless steel and tool steel employment over the past six years--in 1970 and 1975. In 1970, net layoffs were approximately 3,100. There was little improvement in 1972 but in 1973 net recalls totaled about 3,700. In 1975, layoffs exceeded recalls by almost 4,500. About 8500 workers are now in layoff status. In late 1975, workers were being recalled in significant numbers at Armco's Baltimore plant, Latrobe Steel's Latrobe (Pa.) plant, and Jessop Steel's Washington (Pa.) plant. The Labor Department expects no more large layoffs and gradual rehiring of most workers currently in layoff status over the coming year, provided current economic trends continue. However, a substantial number of workers are still likely to be unemployed for most of 1976.

The state most affected by layoffs is Pennsylvania, particularly in the Pittsburgh area. In three counties between

1 750 and 1000 persons were laid off from stainless and alloy tool
2 steel plants, and in another three counties 300-500 persons
3 were laid off. About 1500 persons are laid off in New York,
4 1250 in Ohio, 600-700- in Maryland and Michigan, 300 in Indiana,
5 and 100 in Connecticut.

6 In most areas where layoffs have occurred, the unemployment
7 rate is higher than the national average. Further, the mobility
8 of workers is limited by the highly specialized skills needed in
9 specialty steel plants and the fact that a majority of the workers
10 are 45 years of age or older. As a result, the prospects of
11 separated workers finding comparable alternative employment are
12 generally not favorable.

13 The number of layoffs that appear to be attributable to
14 increased imports in 1975 is minor as imports increased by only
15 2,000 tons -- equivalent to about 60 jobs. If imports had been
16 excluded totally from the U.S. market in 1975, perhaps as many
17 as 3600 additional layoffs might have been avoided. If imports
18 had not increased their market share in 1975, the number of
19 layoffs might have been reduced by 1400.

20 Capacity, Investment, and Profitability

21 Domestic producers have added to production capacity for
22 melting stainless steel (+6 percent from 1970 to 1974), stain-
23 less sheet, plates, and strip (+13 percent), rods (+7 percent),
24 and bars (+15 percent). Tool steel capacity, however, has declined
25 by 3 percent. Virtually all producers have improved existing
26 facilities and increased yields and productivity. No new plants
27 have been built in the last five years.

1 A considerable amount of domestic capacity has been
 2 unutilized during the 1970-75 period. Utilization rates of more
 3 than 75 percent or more were achieved only in 1973 and 1974.
 4 During most of 1974, producers were reported to be operating at
 5 capacity but the annual rates varied from 76 percent for stain-
 6 less sheet, plate, and strip to 89 percent for alloy tool steel.
 7 This may be accounted for by the 97 percent capacity utilization
 8 rate for melting (which provides input to all other operations)
 9 and declining operating rates in late 1974. In 1975, operating
 10 rates dropped back to 30-50 percent depending on the product
 11 category.

12 Despite low capacity utilization rates, only stainless
 13 steel rod operations have operated consistently at a loss during
 14 the last six years (in four of the six years). Stainless bar
 15 and alloy tool steel production also resulted in losses in two
 16 of the six years (1970 and 71). In 1974, all products generated
 17 record high profits totaling \$224 million--13 percent of net
 18 sales. Despite the sharp drop in sales and operating rates for
 19 January-September 1975, only sheet and strip operations recorded
 20 a loss and stainless plate and alloy tool steel continued to
 21 produce substantial profits on sales (15 percent and eight per-
 22 cent respectively). Recent performance contrasts with that of
 23 the 1970-71 recession when only stainless plate, sheet, and
 24 strip produced any profit despite significantly higher operat-
 25 ing rates on all product lines than prevailed in 1975.^{1/}

27 ^{1/} All profit and loss data are based on 16 producers account-
 28 ing for about 90 percent of production.

1 On the basis of overall plant operations, including products
2 not covered by the ITC investigation, aggregate performance has
3 consistently been profitable with return on sales ranging from
4 a low of 1.7 percent in 1971 to 11.1 percent in 1974 (3.3 per-
5 cent for January-September 1975).

6 With respect to stainless and tool steel operations,
7 none of the 20 companies in the industry operated at a loss in
8 1974 and only one had a return on sales of less than five percent.
9 None of the largest firms (over \$75 million sales) have operated
10 at an annual loss at any time between 1970 and 1975 (the number
11 of companies in this category ranging from two to nine during
12 the period). Six firms recorded profits on sales in excess of
13 five percent (including only one firm below \$25 million in sales),
14 while five recorded losses (all with sales less than \$25 million).
15 The 1975 performance of firms in the industry was somewhat better
16 than in the 1970-71 recession when only three firms made over
17 five percent on sales and as many as nine firms operated at a
18 loss.

19 Capital expenditures by domestic producers on facilities
20 used in the manufacture, warehousing, and marketing of stainless
21 steel and alloy tool steel averaged annually about \$50 million
22 for 1971-73 and \$81 million for 1974-75.^{1/} Expenditures for
23 1976 were estimated at \$113 million although there are reports
24 that firms are stretching out schedules and postponing projects,
25 which may reduce that figure significantly. The increase in
26

27 ^{1/} Based on reports from 17 producers representing 90 percent
28 of production.

~~CONFIDENTIAL~~

1 capital expenditures in recent years reflects inflation in
2 equipment costs, required environmental control expenditures
3 and also suggests that producers expect a reasonable return on
4 their investments and that capacity utilization rates will recover
5 sufficiently to create the need for more capacity.

6 Research and development expenditures are minor--amounting
7 to less than one percent of sales.

8 Outlook and Long Term Prospects

9 A critical factor in evaluating the need for and the amount
10 and duration of relief needed by domestic stainless and alloy
11 tool steel producers and the impact of such relief, is the out-
12 look for the domestic and world markets and the competitiveness
13 of U.S. firms in those markets.

14 Recovery of the domestic economy is underway and is forecast
15 by the Council of Economic Advisors to result in a 6-6.5 percent
16 increase in real GNP for 1976. Favorable prospects for automo-
17 biles, appliances and other consumer goods should be reflected
18 in increased demand for stainless and alloy tool steels. How-
19 ever, because of generally low capacity utilization rates new
20 plant and equipment expenditures will probably not rise markedly
21 during 1976. The capital goods industry is a major market for
22 stainless and alloy tool steels and there will be some lag in
23 improvements in this market.

24 World economic activity generally appears to have bottomed
25 out but recovery in most major economies is lagging behind that
26 of the United States. As a result, the stainless and alloy tool
27 steel industries of most of these countries will continue to be

~~CONFIDENTIAL~~

1 under pressure to maintain export markets through competitive
2 pricing during most of 1976.

3 The extent of recovery in the U.S. stainless and alloy tool
4 steel market in 1976 is difficult to predict because the market
5 tends to expand and contract rapidly and over a wide range. One
6 industry estimate for 1976 calls for a gain of 20-25 percent for
7 stainless steel sales. Even such a substantial gain would imply
8 production by the domestic industry for the year only two-thirds
9 of 1974 record levels although operating rates might be at much
10 higher levels by the end of the year.

11 In view of the continuing world economic slowdown, it is
12 unlikely that U.S. exports will contribute significantly to
13 domestic production gains in 1976.

14 Given the cyclical nature of the industry it is difficult
15 to forecast trends during the 1977-80 period. It is unlikely,
16 however, that the conditions that led to shortages experienced
17 in 1973-74 will recur.

18 Over the long term the U.S. stainless and alloy steel
19 market is expected to grow more rapidly -perhaps 4-5 percent
20 annually- than the overall steel market. It has been stated by
21 industry representatives that U.S. firms are currently cost com-
22 petitive with foreign firms. Therefore, it would appear that
23 they are in a position to participate fully in that growth. In
24 terms of scrap availability for melting (the industry's basic
25 raw material) and energy supply, the U.S. is in a better position
26 than Japan or most European competitors. All major producers
27 are dependent to a large extent on imported materials such as

1 chromium -- so none has a distinct advantage. Labor costs
2 generally appear to be rising more rapidly abroad. Finally,
3 in terms of technology the U.S. industry is as advanced as any
4 other in the world.

5 Adjustment Assistance for Workers

(DOL)

6 The Department of Labor has received 14 petitions for
7 certificates of eligibility to apply for worker adjustment assist-
8 ance from the stainless and tool steel industry. Four petitions
9 have been certified to date and none have been denied. An
10 estimated 3000 workers may apply as a result of the four certi-
11 fications, and 432 had actually applied by December 15, 1975. The
12 petitions that have been received cover about 6,400 workers.

13 If certified, a large proportion of the displaced workers
14 is likely to draw maximum trade allowances. The Act provides
15 that workers may receive allowances equal to 70 percent of their
16 average weekly wage (but not in excess of the average weekly
17 manufacturing wage). Because specialty steel is a high wage
18 industry (\$7.94 per hour in 1975), the benefits for many workers
19 may be less than 70 percent of their average weekly wages (the
20 current national average for all manufacturing would limit
21 workers' allowances to 60 percent of the industry's average
22 wage).

23 The DOL estimates that over the next 12 months about 1600
24 workers may apply for certification. If economic conditions
25 continue to improve it is believed that no additional workers
26 would be likely to apply.

27 A number of workers may enroll in training programs and
28

1 consider relocating because recalls in specialty steel plants
2 will not be rapid enough to avoid long periods of unemployment
3 for many workers. The Department of Labor has determined that
4 the Comprehensive Employment and Training Act (CETA) programs in
5 impacted areas are not capable of meeting the needs of the dis-
6 placed workers in view of high general unemployment rates in
7 these areas.

8 Adjustment Assistance for Firms

9 No applications for trade adjustment assistance have been
10 received from specialty steel firms. Applications are not
11 expected in significant numbers -- in part because only the
12 four or five smaller independent producers would likely be found
13 eligible.

14 Effectiveness of Import Relief to Promote Adjustment

15 The purpose of import relief under "escape clause" proceed-
16 ings, as stated in Section 203(a) of the Trade Act, is "to prevent
17 or remedy serious injury or the threat thereof to the industry
18 in question and to facilitate the orderly adjustment to new com-
19 petitive conditions by the industry in question."

20 The ITC reported that large gains in productivity have been
21 achieved by domestic producers through cost reduction programs,
22 modernization, close review of product mix with increased
23 specialization and elimination of unprofitable lines, and closer
24 control of inventory and energy costs. Between 1970 and 1974
25 output per man-hour increased by about one-third. At the same
26 time wages per hour rose by 62 percent which suggests that unit
27 labor costs increased.

~~CONFIDENTIAL~~

As a result of rising costs abroad and dollar devaluations, however, U.S. producers feel that they are now generally competitive with major foreign producers on a cost basis (although import prices are generally significantly lower). The principal argument by the petitioners is rather that the conditions of international trade in specialty steel products should be adjusted to prevent "recurrence of the devastating economic effects of unrestrained imports currently entering the American market." Specifically, the petitioners asked that quotas be established as an interim measure to provide time to negotiate a permanent multilateral arrangement to protect against market disruptions caused by sharp or substantial import increases or the threat thereof or by offering prices below those prevailing for similar goods of comparable quality in the U.S. market.

If there are no adjustments to be made by the domestic industry to meet import competition, then import relief will be ineffective as a means to promote adjustment.

The industry is particularly vulnerable to changes in the business cycle and is faced with compounded difficulties when imports do not respond as quickly as domestic shipments occur during downward swings in the cycle. Import relief could result in greater profitability for the specialty steel industry, which was found by the International Trade Commission to be a low profit industry. Increased profits could be reinvested to improve existing facilities and to increase efficiency in production. It could also permit increased expenditures on research and development so that the producers not only could reduce costs, but could deliver new, higher quality products as well.

Domestic producers have indicated that a quota system would permit them to plan future capital expansion with some assurance that there will be a market for their increased capacity. This is a questionable assertion in economic terms because the principal cause of swings in capacity utilization is the domestic business cycle. Quotas will have no effect on business cycles but under the ITC's proposed remedy will provide for importers

~~CONFIDENTIAL~~

FORD

~~CONFIDENTIAL~~

1 to take some share of the decline during a recession. The
2 import volumes involved, however, are relatively insignificant
3 in relation to the swings in domestic consumption and shipments.
4 Further, given the temporary nature of import relief it would
5 probably not provide adequate long term assurance of markets to
6 justify large scale investments that are not otherwise sound
7 economically.

8 Effect of Relief on Consumers and Competition

9 The effect of relief that restricts imports would be higher
9a prices to consumers and reduced domestic competition. The effect of
10 increased prices on the economy would be small but competition could
10a be seriously affected depending on the level and type of restrictions
11 adopted.

12 The U.S. industry is highly concentrated in all of the
13 product categories covered by the ITC determination. During
14 1975, price levels declined in some categories (e.g., stainless
15 sheets and bars) but were maintained or increased in others
16 (e.g., stainless plate and rod and alloy tool steel), despite a
17 precipitous drop in sales. Cost pressures have been severe in
18 the industry from rising wages, energy costs, and materials
19 costs among other factors. Because of the concentrated structure
20 of the industry there is considerable resistance to price reduc-
21 tions and a longer term tendency to pass on increased costs to
22 consumers. Competition from imports serves to hold prices below
23 levels they might otherwise attain. Price differentials between
24 domestic and imported products are substantial in most product
25 categories--ranging as high as 50 percent but generally from
26 20-35 percent during 1975. Should imports be limited to smaller
27 volumes, there will be an incentive for foreign suppliers to
28 raise prices toward domestic levels to maximize profits, although

~~CONFIDENTIAL~~

FORD

1 some differentials would be maintained. However, assuming
2 import prices had been comparable to domestic prices in 1975,
3 the value of imports would have been substantially higher,
4 costing consumers about \$40 million more.

5 Without the limitation of import competition, the U.S.
6 industry would be freer to raise prices. Increases are
7 especially likely in concentrated industries, such as specialty
8 steel. Import prices would follow, so the prices of all specialty
9 steel consumed in the U.S. would rise. While it is unlikely that
10 the total demand for specialty steel would fall off significantly
11 as prices rise--because substitutes are limited and the cost of
12 specialty steel is a small part of the final price of goods incor-
13 porating them--this does not preclude a substitution of domestic
14 output for imports. The inflationary impact on the overall
15 economy would be small (the weight of specialty steels in the
16 BLS Wholesale Price Index is .00175).

17 It should be noted also that increased prices for specialty
18 steels may affect the competitiveness of industries that may be
19 in the future under investigation under escape clause provisions
20 and there might be some snowball effect on determinations in such
21 cases. Stainless steel flatware and stainless steel wire are
22 currently under investigation by the ITC.

23 The price benefits to consumers of specialty steel imports
24 exist despite some of the disadvantages to consumers relying on
25 foreign sources. The foreign producer of specialty steel is
26 in some cases not the preferred supplier of domestic users because
27 of the long lead-times involved in obtaining imported supplies
28

1 and the volatile nature of domestic demand for finished goods
2 containing these steels. Under such circumstances, reliance
3 on foreign suppliers entails the risk of extensive inventory-
4 carrying costs or interruption of supplies. However, some
5 importers do maintain substantial inventories in the United
6 States which permit them to overcome this shortcoming.

7 Not only would consumers pay higher prices, but also their
8 access to foreign sources during peak demand periods such as 1974
9 would be restricted.

10 In addition to serving as a general supplement to domestic
11 production during peak periods, imports broaden the range of
12 specialty steels available to U.S. industrial users. The most
13 prominent instances of this in the specialty steel case involve
14 the importation of stainless razor blade and flapper valve steels
15 which are not produced in the U.S. There also are reported
16 cases of the willingness of foreign producers to fill orders
17 involving unusual specifications of dimensions, weight and grade
18 of steel so that they might enter the U.S. market.

19 Imports also are a source of supply of rods for independent
20 U.S. stainless wire producers, who would otherwise have to pur-
21 chase the bulk of their rods from their integrated U.S. competi-
22 tors.

23 The effects of import restraints on competition in domestic
24 markets would likely be to reduce competition with the long term
25 consequence of encouraging inefficient use of resources in the
26 economy. Historically, imports have been an important spur to
27 domestic efforts to improve productivity and hold down costs.

1 Constraints on imports would reduce incentives to do so in the
2 future.

3 The Federal Trade Commission (FTC) has submitted a memor-
4 andum expressing its concern about the economic and competitive
5 implications of the ITC's recommendations. The FTC's view is
6 that "specialty steel producers have not made a case for quotas
7 and that establishing quotas . . . would result in higher prices,
8 promote the cartelization of international markets, and establish
9 a precedent for a wave of importunings for further government
10 regulation on behalf of essentially healthy domestic industries."
11 In the FTC's judgment this "would constitute a substantial cause
12 of serious ultimate injury to competition and to American con-
13 sumers."

14 Costs of Employees, Communities and Taxpayers

15 Import relief no more restrictive than the ITC recommenda-
16 tion would have little beneficial effect for those workers and
17 communities hardest hit by recent layoffs. Imports in the second
18 half of 1975 were only 47 percent of the quota for 1976, so
19 increases in imports from present levels could occur before the
20 effect of quotas is felt. It is only as the domestic economy
21 recovers that significant recalls and reductions in local unem-
22 ployment will occur. Failure to provide such relief therefore
23 would probably have the effect of delaying temporarily some
24 recalls.

25 Import relief in the form of adjustment assistance to workers
26 would be of substantial benefit to workers and communities by
27 providing income to laid off workers for a sufficient period of
28

~~CONFIDENTIAL~~

1 time to permit the domestic recovery to take hold. Such relief
2 would be particularly significant for workers if their unemploy-
3 ment benefits or SUB-benefits provided by the union run out. On
4 the other hand, the additional costs to taxpayers might be sub-
5 stantial (on the order of \$25 million).

6 Failure to provide adjustment assistance might create hard-
7 ships for substantial numbers of workers awaiting recall by the
8 stainless and alloy tool steel industry.

9 In terms of costs to taxpayers, import relief might have
10 the effect of reducing the amount of unemployment insurance
11 paid out and increasing taxes paid by recalled workers and by
12 specialty steel firms. Adjustment assistance could represent
13 a substantial outlay by the government to laid off workers whether
14 or not other forms of relief are granted. Any compensation
15 granted would reduce import duties collected. The effect of
16 import relief on duty collections for products affected is
17 uncertain.

18 National Security Interests (DOD)

19 The Department of Defense/estimates that their direct con-
20 sumption (the amount of material that is actually incorporated
21 into weapons' systems and equipment) of stainless steel and alloy
22 tool steel is less than 4 percent of total domestic production.
23 During a national emergency, of course, defense demands upon the
24 mobilization base would increase substantially. Clearly however,
25 there is an inseparable national security inter-relationship
26 between these direct national defense needs and "indirect" essen-
27 tial civilian requirements such as transportation, communications,
28 and energy, all of which are vital to the defense establishment.

~~CONFIDENTIAL~~ 31-
~~CONFIDENTIAL~~

1 While the direct defense production requirements can be satisfied
2 from the domestic market place, the D.O.D. is concerned as to
3 the general economic condition of the industry. A healthy, domes-
4 tic industry is required to continue to support a viable U.S.
5 research and development effort in the low-volume, high perform-
6 ance special metals needed for national defense purposes.

7 U.S. Industry and Labor Views

8 At oversight hearings on trade policy and administration
9 held in early February 1976 by the Senate Finance Committee,
10 representatives of the steel and specialty steel industries and
11 the United Steelworkers of America all testified that they are
12 strongly in support of the ITC findings and proposed remedy.

13 The labor representative indicated that the specialty steel
14 case is a test case with implications much broader than for this
15 one industry. He referred to the recent creation of barriers to
16 trade by Sweden, Australia, Britain, and the EEC and he stated
17 that:

18 "It's hard to believe that the President will not
19 endorse the Commission's recommendations. In this first
20 major test, we must make the Trade Act work."

21 This view was given in the context that organized labor did not
22 support the Trade Act and its belief that the Federal Government
23 has not carried out the spirit or the letter of the law in its
24 implementation.

25 The steel industry representative contrasted the European's
26 approach to their steel problems, to the open U.S. process that
27 provided all affected parties an opportunity to provide inputs
28

1 and to the slowness of the U.S. process which permits damage
2 to continue for as long as eight months. He argued for an
3 international agreement on steel that would provide for consul-
4 tations and prompt actions to safeguard national steel industries
5 from future market disruption.

6 The specialty steel industry representative stated that
7 although the ITC:

8 "did not go as far as the specialty steel companies
9 had recommended during the hearings . . . [but the com-
10 panies] totally, unanimously and without reservation
11 support the Commission's recommendation to the President."
12 He expressed concern that foreign competitors are attempting by
13 political means to achieve what they were unable to accomplish
14 despite their full participation in the ITC investigation and
15 hearings. The industry's view is that the ITC proposed remedy
16 is reasonable and moderate in its treatment of importers.
17 The industry's representative also argued that the President's
18 decision in this case would "establish clearly whether the
19 intent of Congress and the intent of the legislation is to be
20 carried out."

21 Foreign Restraints on Trade

22 No significant barriers to imports or restraints on exports
23 of specialty steel products which have diverted trade to the U.S.
24 market have been identified.

25 During the period of the U.S. VRA's with the EC and Japan
26 trade reports indicated an agreement also existed between the
27 EC and Japan. This agreement was never officially acknowledged.

1 Since the exports to the U.S. were already being limited during
2 that period, there would have been no appreciable trade diver-
3 sion from such an agreement.

4 The 1976 EC-Japanese arrangement apparently applies to the
5 big six Japanese producers, only three of whom produce specialty
6 steels. There are sixteen Japanese specialty steel producers
7 that are reportedly not participating in the restraint agreement.
8 The EC also is trying to negotiate an agreement with Spain, but
9 without success to date.

10 The Swedes and the EC, as part of their free trade agree-
11 ment included a special platform system on specialty steel --
12 essentially a tariff rate quota. This system permits a five
13 percent per year increase in tonnage volume. Swedish exports
14 above that level are dutiable at the tariff level existing prior
15 to the agreement.

16 Tariff rate quotas were imposed recently by Australia which
17 might have a very small diversionary effect.

18 Potential Compensation and Its Impact

19 Article XIX of the GATT permits adversely affected countries
20 having a substantial export interest in the products/^{affected by escape clause actions}to withdraw
21 substantially equivalent concessions if required consultations do
22 not result in agreement. It does not require the granting of
23 compensatory concessions when a country takes emergency action
24 to curb imports of particular products. However, the United
25 States has consistently insisted on compensation when it is the
26 affected party and has offered compensation when it acts under
27 escape clause provisions.

1 Under several of the bases normally used for calculation
2 of compensation the United States could maintain that little or
3 no compensation is due other countries since the proposed quotas
4 for 1976 are larger than average U.S. imports in the most recent
5 three-year period, the most recent five-year period, or even a
6 three-year period which includes a projection for 1975. If the
7 ITC recommended floors for quotas for subsequent years govern
8 imports, it becomes more difficult to argue that compensation
9 is not owed since imports could be cut back by 7,100 tons to the
10 1970-74 level.

11 In view of the existence of voluntary export restraints
12 by some countries from 1972-74, other countries well may consider
13 that the period upon which the quotas is based is not a repre-
14 sentative one. They may request compensation based on trade of
15 another period -- for example, the most recent 12 months. The
16 quotas for 1976 represent a cut back of 30,700 tons from
17 October 1974 - September 1975. At a calculated unit value of
18 \$1315 a ton, trade to be compensated for could be valued in the
19 neighborhood of \$40 million. On the same basis, if the 1977-80
20 quota floors are in effect trade to be compensated for would be
21 valued at nearly \$50 million annually.

22 Even if the U.S. were able to persuade most countries that
23 compensation is not required, it is likely that Japan will claim
24 compensation or alternatively resort to retaliation. Japan could
25 claim that the overall size of the quotas is too small since U.S.
26 imports in the period upon which they are based were abnormally
27 low because of voluntary export restraints by Japan and others.

1 Japan will certainly claim that it is further penalized by the
2 use of the three-year 1972-74 period as the basis for country
3 allocations. In this period, Japan supplied 38 percent of U.S.
4 specialty steels imports and in the five-year period used as
5 the base for determining the size of the quotas it supplied 47
6 percent. It could claim compensation on this basis, or if Japan
7 were to adopt the position that its exports of 89,700 tons in
8 October 1974 - September 1975 were normal, it might claim com-
9 pensation for a cut back of 35,700 tons, with an estimated value
10 of \$47 million. It seems clear that some accommodation would
11 have to be found for Japan.

12 With respect to most other major suppliers aggregate 1976
13 quotas are sufficiently liberal to argue against compensation
14 (one possible exception being Spain). However, on a product
15 category basis there may be some basis for compensation partic-
16 ularly with respect to alloy tool steel from Sweden, Canada, the
17 U.K., Germany, and Spain; and stainless plate from Canada. The
18 problem with alloy tool steel is aggravated by the fact that the
19 ITC's proposed quota does not provide for an estimated 1,100 tons
20 imported previously under "basket" categories. Thus the quota
21 is understated by that amount.

22 To date there have been no specific threats of retaliation
23 so the impact on other industries cannot be predicted.

24 Should an orderly marketing agreement be negotiated normal
25 practices would not call for retaliation or compensation.
26 Tariffs or tariff rate quotas, on the other hand, would be sub-
27 ject to retaliation or compensation.

1 Effect of Relief on International Economic Interests

2 The countries which would be principally affected by this
3 institution of the proposed import control program for specialty
4 steel are Japan, Sweden, Canada, and, in the European Economic
5 Community, France, Belgium, the United Kingdom and West Germany.
6 They are of the unanimous opinion that the alleged difficulties
7 of the United States specialty steel industry have not been
8 caused by import competition and therefore the proposed imposi-
9 tion of quantitative limitations on imports of specialty steel
10 could not be justified. In their view, the unsatisfactory opera-
11 tions being experienced by sectors of the United States steel
12 industry are of a short term cyclical nature, like those currently
13 being experienced by producers in other industrialized countries
14 and do not reflect a permanent or fundamental deterioration in
15 the competitive position of the United States industry.

16 It seems abundantly clear that the affected exporting
17 countries, which include all of our major trading partners,
18 do not find the International Trade Commission's rationalization
19 persuasive. Thus, the unhappiness that would naturally follow
20 the imposition of restrictions on imports would be supplemented
21 by a very strong feeling abroad that the United States had acted
22 out of sheer protectionism. Restrictive action would inevitably
23 be compared with our statements at Tokyo, in the OECD, and, more
24 recently at Rambouillet, calling for a more open international
25 exchange of goods and urging governments to resist protectionism
26 or other inward looking policies in formulating measures to
27 stimulate internal economic expansion.

1 Presidential acceptance of the International Trade Commission
2 proposal would probably impair our relations with Japan, Sweden,
3 the EEC countries, and Canada. There have been a number of
4 developments in the trade field disturbing to the Japanese. Aside
5 from the case in question, the ITC is currently engaged in seven
6 investigations under the Escape Clause provisions of the Trade
7 Act. In most of these cases Japan is the predominant supplier.
8 Shortly after the Commission made public its determination in the
9 specialty steel investigation, it announced the initiation of an
10 investigation of round stainless steel wire. Japan supplies more
11 than one-half of total U.S. imports of this commodity. Moreover,
12 the ITC has made one recent dumping finding against the
13 Japanese in an investigation. Other dumping investigations,
14 including the very important automobile case, are now pending.
15 These actions are being interpreted in Japan as being directed
16 primarily against Japanese exports. In late November the
17 Japanese Government formally expressed to us its concern about
18 what is termed "an unprecedented number" of investigations
19 affecting 20 percent of total Japanese exports to the U.S.
20 It requested that the U.G. Government avoid to the greatest
21 extent possible the adoption of restrictive measures in imple-
22 menting the Trade Act. (Note: There has been a negative ITC finding
22a on iron and steel nuts and bolts which is of substantial interest
23 to Japan.)

23a The Japanese Government has argued that the allocation
24 of quotas under the ITC recommendation on the basis of market
25 shares during the 1972-1974 period would discriminate against
26 Japan since her exports of the items were held down under the
27 Voluntary Restraint Agreement with the United States during a
28

~~CONFIDENTIAL~~

1 substantial portion of that period, while favoring some European
2 and third country suppliers.

3 Following the announcement of the ITC recommendation,
4 stories appeared in the Japanese press implying possible retal-
5 iation if the recommendation were accepted. Although these
6 reports have been denied by Japanese officials, the Government
7 of Japan has a variety of ways in which to demonstrate its
8 displeasure. During the past few years Japan has moved ahead
9 steadily in liberalizing foreign access to its economy. By the
10 end of 1975 Japan had eliminated all import quantitative restric-
11 tions not in conformity with GATT for industrial products other
12 than leather goods. Restrictions on computers, together with
13 peripherals and parts, were dropped in December. If Japanese
14 policy-makers draw the conclusion that the United States is pro-
15 ceeding on a protectionist course, the continuation of the pat-
16 tern of liberalization could be jeopardized. Furthermore, a
17 decision to accept the ITC recommendation in the steel case could
18 seriously complicate our efforts in the Multilateral Trade Nego-
19 tiations to obtain removal of a number of Japanese agricultural
20 quotas. It is also conceivable that Japan could impose unilateral
21 restrictions on a variety of U.S. exports to Japan.

22 Sweden, the source of 40 percent of total United States
23 tool steel imports in 1974, is the second ranking supplying
24 country of the articles of interest. Japan and Sweden together
25 accounted for more than half of the total United States import
26 tonnage covered by the Commission's proceeding and nearly 60
27 percent of their total value. In addition to the problem that
28

- 39 -
~~CONFIDENTIAL~~

1 would be created by the adoption of the specialty steel pro-
2 posal, we would also have outstanding, as with the Japanese, a
3 major difference in view stemming from United States policy in
4 the application of the antidumping provisions of our trade
5 legislation to imports of Swedish automobiles. As a result,
6 the Swedes are already upset over pending United States actions
7 affecting nearly a third of the value of their total shipments
8 of goods to the United States in 1974.

9 France, Belgium, the United Kingdom and West Germany are
10 key countries in EEC decisions in the Multilateral Trade Nego-
11 tiations. We will need EEC cooperation to achieve the kind of
12 broad agreement on the trade liberalization we are seeking. The
13 member states are upset over the countervailing case on their
14 value added tax system and the threat to their multibillion
15 dollar trade in automobiles arising from ^{the} antidumping investiga-
16 tion. Press reports indicate that the proposed import control
17 program has evoked widespread industry protest in the EEC with
18 hints that industry spokesmen would press for trade reprisals
19 if the Commission's proposal were to be adopted.

25 Canada is also importantly affected. We are currently
26 engaged in exchanges with the Canadians on a broad front of
27 issues. Some recent exchanges have received extensive publicity
28

~~CONFIDENTIAL~~

1 charging the political atmosphere in Canada. The adoption of
2 controls on shipments of Canadian specialty steel will complicate
3 the resolution of outstanding problems in a manner which accom-
4 modates our interests.

5 The Canadians, who view the problem in the same perspective
6 as the interested officials in other exporting countries, state
7 that there is only one firm producing specialty steel in Canada
8 and that adoption of the Commission's proposal would have a
9 serious effect on its operations. Further Canada is a net
10 importer of stainless and alloy tool steels with respect to the
11 United States.

12 The OECD Trade Pledge, renewed in May 1975, was designed to
13 (a) promote consultations on international trade problems and
14 (b) avoid unilateral trade measures taken to correct economic
15 problems (although GATT Article XIX actions are not precluded). In the
16 specialty steel case, assuming relief would be pursued in the context
17 of Article XIX, it would be consistent with the spirit of the Trade
18 Pledge to discuss the case in the OECD.

19 The economic summit at Rambouillet produced a confirmation
20 of commitment to the anti-protectionist principles of the OECD
21 Pledge with an exception for "industries suffering or threatened
22 with serious injury as a result of increased imports, on the basis
23 of particularly acute and unusual circumstances."

24 Granting of any form of relief would preclude MTN negotiations
25 on such items while relief is in effect. If the Administration
26 were to decide to pursue sectoral negotiations on all steel, such
27 negotiations might be impaired since specialty steels are of signi-
28 ficant trade interest to major countries that would be involved.

29 Foreign Industry Conditions

30 Foreign stainless and alloy tool steel producers apparently
31 are suffering severely from the current world recession.

32 In Japan, it has been reported that all non-integrated
33 specialty steel producers are in financial difficulties and that
34 its largest producer lost money in the most recent accounting
35 period. While capacity utilization rates have not fallen as far
36 as in the United States or the EC for steel generally, the
37 Japanese are experiencing for the first time significant cutbacks
38 in steel production (down 12 percent for 1975).

39 In Sweden, fourth quarter specialty steel production in
40 1975 was one-third less than in the same 1974 period. (off 9% for 1975
41 overall).

42 In the EC, total steel production was off sharply in 1975
43 (-20 percent) with larger than average declines in France, Germany,
44 and Belgium.

45 Most of these countries are much more dependent on trade

46 ~~CONFIDENTIAL~~

1 than the United States, The ratio of exports to production of
 2 stainless steel in 1974 were over 40 percent for France and
 3 Sweden; 20-40 percent for Germany and the U.K.; and about 19
 4 percent for Japan; and only 5-6 percent for the United States.
 5 In 1974, exports to the United States generally represented less
 6 than 20 percent of total exports by these countries, however,
 7 more than 10 percent of Swedish, Japanese, and British exports
 8 of stainless steel were directed to the U.S. market and in the
 9 case of the Japanese, particularly, the importance of the U.S.
 10 in total exports undoubtedly was much higher in 1975. Thus, U.S.
 11 action on specialty steel could significantly impact on several
 12 of the foreign industries, which are already experiencing dif-
 13 ficulties.

14 It should be noted that while Japan and Sweden are large
 15 net exporters of specialty steels, most other suppliers rely
 16 heavily on imports.

16a Data are not available on unemployment in foreign specialty
 17 steel industries although there are indications that layoffs are
 17a probably less extensive than in the U.S. industry.

18 Foreign Government Involvement in Their Steel Industries

19 It has been argued by industry representatives that their
 20 principal concern is foreign government involvement with their
 21 producers, which gives those producers an artificial competitive
 22 advantage. In Japan cartels have been organized to allocate
 23 export business among domestic producers. It has been reported
 24 in the press that such a cartel is being formed on specialty
 25 steels. There have been reports of efforts by MITI on behalf
 26 of at least one company to get the Bank of Japan to provide
 27 financial assistance and, in general, MITI is believed to have
 28

1 a significant role in allocating investment capital to Japanese
2 industries.

3 The Japanese appear to follow a market clearing price policy
4 designed to maintain high employment levels, and as a result sell
5 considerable volumes at a loss. At the same thme, the industry
6 maintains a highly leveraged financial position compared with
7 the U.S. industry. To a considerable extent, government policy
8 in Japan appears to help the industry over rough spots and provide
9 guarantees needed to expand capacity and production.

10 The Swedes also attempt to maintain employment levels during
11 recessions and employers are partially reimbursed for the added
12 costs.

13 The EC enjoys certain benefits through the European Coal
14 and Steel Community Treaty such as lower than market interest
15 rates on loans. Within the EC, of course, the nationalized
16 component of the British steel industry operates with direct
17 government support which subsidizes operating losses and provides
18 substantial funds for expansion. Despite unprofitable operations
19 recently, British Steel Corporation has announced substantial
20 expansion plans for specialty steel to reduce the 50 percent of
21 the domestic market now held by imports. Thus a substantial
22 amount of diversion from the U.K. market may result from what is
23 essentially a political decision. The British Government is also
24 financing steel stockpiles to help maintain production levels.

25 Whatever the actual competitive effects of various forms
26 of government involvement in foreign industries, the perception
27 by the domestic industry that there is a substantial threat to
28 their future operations appears to influence their decisions on

1 investment and other matters. It should be noted that the U.S.
2 Government provides at least one significant form of support to
3 the domestic specialty steel industry--preferential U.S. Govern-
4 ment procurement policies which effectively exclude about four
5 percent of U.S. shipments from import competition.

6 In considering the U.S. industry's allegations of govern-
7 ment assistance to foreign firms and that foreign firms sometimes
8 sell at a loss, it should be kept in mind that these allegations
9 concern unfair trade practices. Under our trade legislation,
10 relief from such practices is to be obtained by use of the counter-
11 vailing, antidumping, or other provisions of U.S. law, not by
12 use of escape clause provisions

13 which apply to this case. In fact, Section (201)(a)(6) of
14 the Trade Act states:

15 ". . . whenever in the course of its investigation
16 the Commission has reason to believe that the
17 increased imports are attributable in part to cir-
18 cumstances which come within the purview of the
19 Antidumping Act, 1921, section 303 [the counter-
20 vailing duty law], or 337 of the Tariff Act of 1930,
21 or other remedial provisions of law, the Commission
22 shall promptly notify the appropriate agency so
23 that such action may be taken as is otherwise
24 authorized by such provisions of law."

25 The ITC has not notified Treasury, which has responsibility for
26 administering those laws, of any countervailing or dumping
27 evidence found by the ITC in its investigation.

1 Further, the U.S. industry has not filed antidumping
2 or countervailing petitions for relief from most of the prac-
3 tices described above (except for three antidumping petitions
4 for certain steel products) although the criteria for eligibility
5 is easier. No injury would have to be shown in a countervailing
6 case, but foreign "bounties or grants . . . upon the manufacture,
7 or production or export of any article or merchandise manufactured
8 or produced" in the foreign country would have to be found by the
9 Secretary of the Treasury. In a dumping case the injury test is
10 also easier to meet than in the escape clause, but "sales at less
11 than fair value," which may include sales at below cost, do have
12 to be found by the Secretary of the Treasury.

13 Contextual Considerations

14 This is the first case in which the ITC has reached an
15 affirmative determination under the modified escape clause
16 provisions of the 1974 Trade Act. These provisions were modified
17 the Congress to make escape clause actions easier to obtain than
18 under the previous law. To some extent, industry support for the
19 trade liberalizing aspects of the Act was obtained by making
20 various safeguard procedures easier to use. Some elements of
21 industry that supported the bill and labor unions, who didn't,
22 can be expected to view this case as the first clear indication
23 of whether the Administration will be willing to utilize the
24 import relief provisions. There are additional escape clause
25 cases under ITC investigation including footwear (a much larger
26 trade volume than this case) and stainless steel wire.

27 Granting of import relief likely will be interpreted abroad
28 as a misapplication of the escape clause to assist an

1 industry whose principal problem they believe to be recession.

2 A significant backlog of actions has built up under escape clause
3 and other safeguard procedures with respect to the exports of our
4 major trading partners--particularly Japan and the EC. These
5 nations would perceive import relief for specialty steels as a
6 signal that the U.S. Government is succumbing to protectionist
7 interests. Such perceptions could have adverse implications
8 for the MTN. Further, should relief be granted, these products
9 would have to be reserved from trade negotiation concessions.

10 The ITC's Proposal

11 Acceptance of the ITC's proposed scheme of quantitative
12 restrictions is the only option that is not subject to Congres-
13 sional override.

14 There are several technical problems with the proposal
15 including understating alloy tool steel quotas by six percent,
16 an effective date which cannot be implemented (i.e., Jan. 1, 1976),
17 failure to provide for new suppliers, and the inclusion of razor
18 blade steel, which is not produced domestically, within the quota.
19 These problems are relatively minor and would not preclude the
20 President from accepting the ITC recommendation.

21 The effect of the proposed quotas on imports will vary from
22 product to product as summarized below (not taking the one year lag
23 in applying percentage share of consumption into account):

24 Stainless sheet and strip - Quotas are quite generous in

25 total and provide sufficient room for import growth once
26 consumption recovers. Another peak demand period like 1974
27 would be unlikely to result in serious shortages of imports
28 due to quota constraints, provided sources other than Japan

~~CONFIDENTIAL~~

1 are willing to expand their exports to fulfill their
2 quota potential.

3 Stainless plates - Quotas are restrictive in 1976 but
4 reasonably generous for 1977-80, provided Sweden can expand
5 exports substantially to fulfill its share of the quota.
6 Japan's exports are severely constrained.

7 Stainless bar - Imports would be cut back sharply in 1976
8 and probably constrained well below the 1974-75 average
9 through 1980. Japan again is the big loser, with significant
10 increases required from Spain, Germany, Brazil and Canada
11 to fulfill overall quota levels.

12 Stainless rod - 1976 imports would be reduced slightly but
13 imports from Japan would be deeply cut so that Sweden,
14 Belgium, and France must increase their exports significantly
15 to reach the total quota. During 1977-80, the quotas
16 provide room for growth and higher imports than in 1974
17 should another similar peak demand occur.

18 Alloy tool steel - The quota for 1976 represents a substan-
19 tial cut, particularly for Sweden. Volume would be lower
20 than any year since 1972. For 1977-80, growth would be
21 possible but even if the record 1974 consumption level
22 recurs, imports would be constrained below the 1973-75
23 annual average.

24 On the major volume of imports, the quotas are not seriously
25 constraining even if a peak demand period occurs while they are
26 some flexibility in applying the market share criterion and
27 in effect, assuming that suppliers who have room to expand
28 exports to the U.S. market actually do so. The principal excep-

~~CONFIDENTIAL~~

1 tions are stainless plate in 1976, stainless bar for 1976-80,
2 and alloy tool steel for 1976-80. Also, the assumption that
3 sheet and strip imports will be able to expand to meet more
4 generous quota levels is open to question.

5 Given this pattern of constraint or lack thereof it appears
6 that the proposed restrictions would:

- 7 - probably have little effect on domestic production levels
- 8 in 1976 and hence generate little acceleration in recalls
- 9 of workers. Gains that would occur as a result of
- 10 effective import constraints on stainless plate and bar,
- 11 and alloy tool steel are small in tonnage terms (perhaps
- 12 10-15,000 tons) and may be offset by losses due to increases
- 13 in sheet and strip imports (which can expand by 13,500 tons)
- 14 - be likely to reduce price competition on stainless plates
- 15 and bars and alloy tool steel while maintaining some price
- 16 competition for other products, particularly sheet and
- 17 strip. In the former categories there would be an incentive
- 18 for both domestic and import prices to rise. This would
- 19 imply higher costs to consumers with a good deal of the
- 20 benefit going to foreign suppliers.
- 21 - definitely result in retaliation or negotiations for
- 22 compensation involving the Japanese. A substantial amount
- 23 of trade (e.g., \$40-50 million) would be involved.

24 Modified Quantitative Restrictions

25 To take care of some of the technical problems of the ITC
26 proposal and provide a better balance in terms of the constraining
27 effects of quotas, a different mix of quotas could be designed

~~CONFIDENTIAL~~

1 within the same overall quotas provided by the ITC. Thus, razor
2 blade steel would be excluded from quotas and the excess in
3 stainless sheet and strip could be distributed among plate,
4 bar and alloy tool steel to ameliorate 1976 cutbacks in those
5 areas. This would probably have little net effect on domestic
6 production and jobs but would reduce domestic price pressures
7 and distortions in import product mix from recent patterns.

8 Another alternative would be to set a total quota only
9 --not for product categories--which would permit imports to flow
10 where competitive pressures drive them. This might adversely
11 affect certain producers in product areas where importers would
12 receive the highest profit.

13 Further, the restrictions could be modified to provide another
14 basis for country allocations (e.g., 1970-74 or 1975) that is
15 more realistic in terms of likely availability of supply and less
16 discriminatory against the Japanese. This would improve possibil-
17 ities for fulfilling quotas provided and minimize the compensation
18 bill with the Japanese.

19 Rather than distributing to the foreign countries, the right
20 to sell specialty steel, such right under the quota could be dis-
21 tributed to American importers. This alternative eliminates the
22 cash transfer to foreign producers implicit in a country by
23 country allocation system. The administrative problems involved,
24 however, would be more serious than any other quota system dis-
25 cussed. It also would complicate the negotiation of compensation.

26 Another possible revision might be semi-annual or quarterly
27 quota estimates that would be more sensitive to shifts in this
28 volatile market.

~~CONFIDENTIAL~~

1 Orderly Marketing Agreement

2 The President may announce his intention to negotiate
3 (OMA),
4 orderly marketing agreements, which in this case would involve
5 at least Japan, Sweden, the EC, Korea, and Spain. Other countries
6 could be permitted to import freely although this would cause
7 significant international problems (e.g. discrimination); be sub-
8 ject to quotas; or OMA's. A series of OMA's could be negotiated
9 within the quota limits proposed by the ITC but with much greater
10 flexibility to respond to particular country concerns (e.g.
11 allowing different product mix within same total). This flex-
12 ibility could serve to reduce the dissatisfaction of foreign
13 producers while keeping U.S. producers more conscious of import
14 competition as a damper on price increases. The terms of such
15 agreements can be subject to regular review and revisions or
16 discontinuance as appropriate (e.g., in the event of domestic
17 shortages). ^R In this case, it is unlikely that the level of
18 imports under OMA's could be held to levels
19 comparable to the ITC's proposed quotas.

20 Orderly marketing agreements traditionally do not require
21 compensation meaning that no increases in foreign barriers to
22 U.S. exports or decreases in U.S. barriers would result. Other
23 domestic industries thus would not be adversely affected although
24 consumers would be denied the benefits of lower cost imports in
25 other product areas.

26 A danger of OMA's for specialty steel is that they may
27 spread to carbon steel.

28 The imposition of country-by-country quotas, or orderly
marketing agreements, will virtually force foreign producers
to cartelize their shipments to the United States, thus reducing

1 competition among importers themselves. This is indirect
2 opposition to our strong anti-cartel policy. Furthermore,
3 by encouraging foreign firms to form cartels for the purpose of
4 allocating shipments to the United States, we may undermine the
5 developing antitrust policies of other nations.

6 Historically, once quotas or OMA's are in effect, it has been
6a difficult to remove them; however, under escape clause provisions
7 there is a time limit on such restrictions based on the authority
7a of the Trade Act.

8 Quotas allocated on a country-by-country basis have the
9 additional disadvantage of allowing foreign producers to capture
10 the increase in import prices that results from the import limi-
11 tation.

12 Tariff Increases or Tariff Rate Quotas

13 Tariff increases or tariff rate quotas would normally provide
14 benefits to the consumer in the form of lower costs and greater
15 availability of supply during heavy demand periods, compared with
16 an equivalent quota. To the extent that foreign producers would
17 absorb tariff increases, consumers would receive savings as com-
18 pared with a quota. Importers would have an incentive to compete
19 and not form export cartels and domestic producers would be
20 somewhat constrained in raising prices.

21 Due to the relative price inelastic demand for specialty
22 steel, the tariff increase required to affect import volumes and
23 provide some domestic production incentive would be large. Price
24 differentials between imported and domestic prices recently have
25 been primarily in a range of 20-35 percent. Tariff increases
26 of that magnitude, however, might prove quite costly to consumers
27 if demand picks up worldwide and world prices rise accordingly.

1 (e.g. during 1974 import prices exceeded domestic prices in many
2 instances) but supplies would be available in contrast to a quota.

3 Price increases of imports with increased tariffs are more
4 likely to be one-time as contrasted with quotas where prices
5 would be expected to continue to increase. Once the initial
6 increase is absorbed and domestic prices rise, import prices can
7 again become competitive.

8 Tariff increases would also result in a very large compen-
9 sation bill for the U.S. to negotiate. Whatever increased customs
10 duties might be collected would be at least partially
11 offset by concessions in other areas. Tariffs have an added
12 disadvantage compared to quotas/ ^{or OMA's} in that they can not be directed
13 primarily at those countries that are the major source of increased
14 imports. The higher cost foreign producers would be more adversely
15 affected.

16 Tariff rate quotas might have a similar effect to tariffs
17 although initial costs to consumers would be reduced if importers
18 practice average cost or mark up pricing, and the compensation bill
19 would be smaller.

19 Adjustment Assistance

20 Adjustment assistance for workers is available without
21 Presidential action, but the President can order expedited
22 handling of adjustment assistance. In view of the substantial
23 layoffs in the domestic industry and the prospect for gradual
24 recalls of workers, expedited assistance would be of substantial
25 benefit to workers. Expedited assistance for firms would probably
26 be of little value in view of the basic health of the industry and
27 the limited number of firms that would be eligible (none of whom
28 have applied).

1 No Relief

2 The President may determine that import relief is not in
3 the national economic interest. In this case it appears that
4 import relief (aside from adjustment assistance) will provide
5 little benefit to the industry and its workers and may entail
6 substantial costs to consumers while adversely affecting U.S.
7 international economic interests. On the other hand, it is certain
8 that an attempt would be made to obtain a Congressional override,
9 probably with a much broader base of support than the firms and
10 workers of the specialty steel industry. In the event of a Con-
11 gressional override, the ITC remedy would automatically go into
12 effect. At that point the President might still have the option
13 to negotiate OMA's to supplant quotas.

14 It may be impractical for the President to declare no import
15 relief in this case without also announcing steps he will take
16 that will respond to the basic concerns of petitioners. He could
17 expedite adjustment assistance to workers which would provide
18 funds to most laid off workers in the industry until they are
19 recalled. In recognition of petitioners' basic concern that
20 foreign government involvement in their steel industries represents
21 a threat of disruption in the U.S. market, there are several actions
22 the President could announce including his intention to negotiate
23 an international safeguard agreement for steel that would protect
24 the U.S. market from sudden or marked disruptions. Such an arrange-
25 ment was part of the solution proposed by petitioners and has also
26 been proposed by the steel industry. This could include carbon steel,
27 90 percent of U.S. steel production by value, which was not covered

~~CONFIDENTIAL~~

1 by the ITC finding. Foreign uncertainty about the pending decision
2 in the case could be used as leverage to get agreement from them to
3 enter into negotiation before the President's announcement. Another
4 option would be to initiate consultations within the OECD to work
5 toward international solutions to steel trade problems.

54 -

E

DRAFT PRESS RELEASE

FOR RELEASE MARCH 16, 1976

PRESIDENT FORD ANNOUNCES IMPORT
RELIEF FOR SPECIALTY STEEL INDUSTRY AND WORKERS

President Ford announced today that he has decided to grant import relief to the specialty steel industry. This is the first affirmative action taken under the escape clause provisions of the Trade Act of 1974.

The United Steelworkers of America and the Tool and Stainless Steel Industry Committee petitioned the U.S. International Trade Commission (USITC) on July 16, 1975 for import relief. On January 16, 1976 the USITC found that the industry was seriously injured substantially due to increased imports. During most of 1975, 25 percent or more of the industry's 30,000 person workforce were laid off and less than half of the industry's production capacity was utilized, causing profits to plummet. At the same time imports rose slightly in tonnage terms and significantly increased their share of the U.S. market. Thus, the President has determined that the industry and its workers need relief.

The President intends to negotiate orderly marketing agreements with key supplying countries for specialty steel products covered by the USITC's affirmative finding of injury. It is intended that these agreements limit imports over a three year period, while the domestic specialty steel industry recovers from the high unemployment and depressed operating levels of 1975. Should orderly marketing agreements not be negotiated successfully the President will proclaim import quotas for a period of three years to take effect no later than June 14, 1976. The quotas will be set at overall levels comparable to those recommended by the USITC.

International consultations have been requested by the United States in the OECD to discuss the problems of our specialty steel industry and the proposed U.S. actions. Bilateral discussions with key supplying countries will be initiated as soon as possible.

In recognition of the special problems of our specialty and carbon steel industry - the President has directed his Special

Representative for Trade Negotiations, in the Multilateral Trade Negotiations, to deal on a sectoral basis with the problems of cyclical distortions in steel trade, while liberalizing the conditions of this trade.

Finally, the President has ordered the Secretary of Labor to expedite processing of trade adjustment assistance petitions, to assist the large number of unemployed specialty steel workers. About 3400 workers of 8500 laid off are already eligible for such assistance.

The decision not to implement at this time the USITC's proposed remedy of quotas for the next five years is based on several considerations. This remedy is too inflexible in view of the rapid expansions and contractions of the specialty steel market and is not well suited to the needs of the industry during recovery from a recession period. The U.S. Government also desires to avoid unilateral restrictive action by trying to resolve specialty steel import problems through agreements with the other major nations involved. In this manner, the disruption to trade can be reduced and the special concerns of other nations can be taken into account, while the injury to the domestic industry is remedied.

Relief will be provided for a period sufficient for the industry to recover a healthy employment and profit position and will be reduced or discontinued when the President determines, with the advice of the USITC and the Secretaries of Commerce and Labor, that this recovery is taking place.

F

DRAFT FEDERAL REGISTER NOTICE

Note: /The statute states that the President shall publish in the Federal Register that he has made a determination of the method and amount of import relief he will provide, or that he has determined import relief is not in the U.S. national economic interest./

TITLE 3 - THE PRESIDENT

Presidential Determination
Under Section 202(b)
Of the Trade Act of 1974

Specialty Steel

/INSERT TEXT OF PRESS RELEASE/

THE WHITE HOUSE

March __, 1976

G

DRAFT LETTER SUBMITTING PRESIDENTIAL REPORT

Dear Mr. Speaker:

In accordance with Section 203(b)(1) of the Trade Act of 1974, enclosed is a report to the Congress setting forth the action I am taking on specialty steel imports pursuant to Section 203(a) of the Trade Act of 1974.

The Honorable Carl Albert
Speaker of the U.S. House of
Representatives
Washington, D. C. 20515

March 16, 1976

IMPORT RELIEF ACTION

STAINLESS STEEL AND ALLOY TOOL STEEL

As required under Section 203 (b) (1) of the Trade Act of 1974, I am transmitting this report to the Congress setting forth the actions I will take with respect to stainless and alloy tool steel (also referred to as specialty steel) products covered by the affirmative finding on January 16, 1976 of the United States International Trade Commission (USITC) under Section 201 (d) (1) of the Trade Act. As my action differs from that recommended by the Commission, I have included the reason for my decision.

I have determined that import relief should be provided to permit the industry to recover from its recent depressed operating levels (less than 50% of capacity) and high unemployment rates (25% or more).

Relief will be continued until such time as I determine, with the advice of the USITC and Secretaries of Labor and Commerce, that the industry has regained healthy production and employment levels.

I intend to negotiate orderly marketing agreements with key supplying countries within the next 90 days. It is intended that these agreements limit imports, of those stainless and alloy tool steel items which are covered, to recent levels while the domestic industry recovers from the high unemployment and depressed operating levels of 1975. If satisfactory orderly marketing agreements are not negotiated successfully, I will proclaim import quotas for a period of three years to take effect on June 14, 1976. The quotas will be set at overall levels comparable to those recommended by the USITC.

I have decided to seek orderly marketing agreements in order to work with the principal nations involved, resolving the immediate problems of our domestic industry in a manner which meets the special concerns of each of the nations affected, while injury to domestic industry is remedied.

To assist the large number of workers who have been laid off, I have ordered the Secretary of Labor to expedite processing of applications for trade adjustment assistance. The income benefits of such assistance for these unemployed workers, should reduce the hardships suffered particularly in cases where unemployment benefits have expired.

In addition to the above actions to be taken under Section 202 of the Trade Act of 1974, I have directed the Special Representative

for Trade Negotiations, in the Multilateral Trade Negotiations, to deal on a sectoral basis with the problems of cyclical distortions in steel trade, while liberalizing the conditions of this trade.

My decision not to accept the USITC's proposed remedy of quotas for a five year period is based on two major considerations. First, the remedy is too inflexible in view of the rapid expansions and contractions of the specialty steel market. During a recession period, imports would not be sufficiently constrained to prevent a recurrence of the problems encountered last year. On the other hand, in the event of a peak demand period with our domestic industry operating near capacity, imports could be held below levels needed by domestic consumers, particularly for certain product categories. Second, the USITC remedy does not take into account special factors affecting certain foreign supplying countries.

Announcements of the actions outlined above will be made in the Federal Register.

DRAFT LETTER SUBMITTING PRESIDENTIAL REPORT

Dear Mr. President:

In accordance with Section 203(b)(1) of the Trade Act of 1974, enclosed is a report to the Congress setting forth the action I am taking on specialty steel imports pursuant to Section 203(a) of the Trade Act of 1974.

The Honorable Nelson Rockefeller
President of the U.S. Senate
Washington, D. C. 20510

March 16, 1976

IMPORT RELIEF ACTION

STAINLESS STEEL AND ALLOY TOOL STEEL

As required under Section 203 (b) (1) of the Trade Act of 1974, I am transmitting this report to the Congress setting forth the actions I will take with respect to stainless and alloy tool steel (also referred to as specialty steel) products covered by the affirmative finding on January 16, 1976 of the United States International Trade Commission (USITC) under Section 201 (d) (1) of the Trade Act. As my action differs from that recommended by the Commission, I have included the reason for my decision.

I have determined that import relief should be provided to permit the industry to recover from its recent depressed operating levels (less than 50% of capacity) and high unemployment rates (25% or more).

Relief will be continued until such time as I determine, with the advice of the USITC and Secretaries of Labor and Commerce, that the industry has regained healthy production and employment levels.

I intend to negotiate orderly marketing agreements with key supplying countries within the next 90 days. It is intended that these agreements limit imports, of those stainless and alloy tool steel items which are covered, to recent levels while the domestic industry recovers from the high unemployment and depressed operating levels of 1975. If satisfactory orderly marketing agreements are not negotiated successfully, I will proclaim import quotas for a period of three years to take effect on June 14, 1976. The quotas will be set at overall levels comparable to those recommended by the USITC.

I have decided to seek orderly marketing agreements in order to work with the principal nations involved, resolving the immediate problems of our domestic industry in a manner which meets the special concerns of each of the nations affected, while injury to domestic industry is remedied.

To assist the large number of workers who have been laid off, I have ordered the Secretary of Labor to expedite processing of applications for trade adjustment assistance. The income benefits of such assistance for these unemployed workers, should reduce the hardships suffered particularly in cases where unemployment benefits have expired.

In addition to the above actions to be taken under Section 202 of the Trade Act of 1974, I have directed the Special Representative

for Trade Negotiations, in the Multilateral Trade Negotiations, to deal on a sectoral basis with the problems of cyclical distortions in steel trade, while liberalizing the conditions of this trade.

My decision not to accept the USITC's proposed remedy of quotas for a five year period is based on two major considerations. First, the remedy is too inflexible in view of the rapid expansions and contractions of the specialty steel market. During a recession period, imports would not be sufficiently constrained to prevent a recurrence of the problems encountered last year. On the other hand, in the event of a peak demand period with our domestic industry operating near capacity, imports could be held below levels needed by domestic consumers, particularly for certain product categories. Second, the USITC remedy does not take into account special factors affecting certain foreign supplying countries.

Announcements of the actions outlined above will be made in the Federal Register.

MEMORANDUM FOR THE SECRETARY OF LABOR

In conjunction with my determination today, under section 202(b) of the Trade Act of 1974, regarding import relief for the specialty steel industry, I hereby direct that you give expeditious consideration to petitions by workers in this industry for trade adjustment assistance under chapter 2 of Title II of the Trade Act of 1974. A copy of the Federal Register notice of my determination is attached.

March 16, 1976

March 11, 1976

MEMORANDUM FOR
THE VICE PRESIDENT

SUBJECT: Specialty Steel Import Case

The President requested that you be provided a copy of the complete package he is presently studying on the Specialty Steel Import Case.

The package consists of the following:

- TAB A - Original Memorandum dated March 1, 1976 from Special Representative for Trade Negotiations plus comments from White House staff reflected in my memorandum of March 6, 1976 to the President.
- TAB B - Memorandum from Ambassador Dent dated March 8, 1976 - "Timetable for Recommended Steel Decision".
- TAB C - Briefing Paper for Presidential Meeting with I. W. Abel and Richard Simmons on March 10, 1976.
- TAB D - Briefing Paper for Presidential Meeting with Congressional Delegates on Specialty Steel on March 11, 1976.
- TAB E - Undated memorandum from Brent Scowcroft received March 11, 1976 suggesting an additional option in this case plus comments from White House staff members.

James E. Connor
Secretary to the Cabinet

March 6, 1976

MR PRESIDENT:

Specialty Steel Import Case

The attached memorandum from Ambassador Dent was staffed to members of the senior staff. Messrs. Marsh, Buchen, Cannon, Friedersdorf and Morton concur with Ambassador Dent's recommendation of Option III.

Max Friedersdorf adds the comment - "We have received a request for a meeting with the President by a number of Congressmen and Senators from Ohio, Pennsylvania, New York and West Virginia to discuss this subject."

Jim Cannon adds the comment - "It is troubling to note, however, that Attachment D - "Specialty Steel Case Background" indicates that "the specialty steel industry is suffering to a large extent from the domestic recession." Thus, it appears that the industry suffers primarily from cyclical, not imports. This certainly throws into substantial question the USITC finding that the industry was seriously injured substantially due to increased imports."

Brent Scowcroft recommends still another alternate to the solutions stated in Ambassador Dent's memo. His comments are attached at Tab #1.

Should you select Option III, the necessary documents to implement your decision will be prepared for your signature.

Jim Connor

MEMORANDUM

THE WHITE HOUSE
WASHINGTON

~~CONFIDENTIAL~~

March 4, 1976

MEMORANDUM FOR: JAMES CONNOR
FROM: BRENT SCOWCROFT *BS*
SUBJECT: Specialty Steel Import Case

I concur with Fred Dent's recommendation to the President on the specialty steel import case, subject to one reservation. I strongly recommend that the President's announcement be modified so as not to unnecessarily limit the President's flexibility and complicate our negotiations by committing ourselves to specific actions if we are unable to reach satisfactory Orderly Marketing Agreements.

Option 3, as currently framed, recommends that the President:

- Proclaim import quotas, effective in 90 days, for a period of three years;
- State that he will seek to negotiate Orderly Marketing Arrangements during the 90-day period; and
- Note that he can reduce or terminate the quotas if the economic position of the domestic industry improves.

I recommend that the President instead:

- Announce his intention to seek Orderly Marketing Agreements with exporting countries over a 90-day period; and
- State firmly that in the absence of a satisfactory agreement he will provide import relief at the end of that period.

The difference is that by not announcing in advance specifically what import relief he would provide, the President would:

- Remove the element of duress which specific threats would bring to the negotiations, yet put the exporting nations on notice that we will take corrective measures if no agreement is reached.

~~CONFIDENTIAL~~

E.O. 13526, 552, 560
MR 93-28, #54, NSC 64, 3/20/96
by *cut* Date 3/7/97

- Maintain through the period of the negotiations his flexibility as to form of relief.

The third element of Fred Dent's recommendation, that the President announce that the remedy could be reduced or terminated depending upon developments, would be included in a Presidential statement announcing the imposition of quotas should negotiations fail.

I realize that this modified option may not be as satisfactory to the steel industry and to the Congress as would the original. It is vital to our relations with our industrialized allies, however, that we maintain the spirit of consultation which we have so carefully nurtured, and I think we can make a strong defense of this course of action to Congress and the industry. Assuming the President would wish his advisors to speak to the steel industries, an effective argument could be made to them that the President:

- was indeed firmly committed to impose significant remedies if satisfactory OMAs could not be reached; and
- was not asking the industry to commit itself in advance, since Congress would still have the opportunity to override if the OMAs or quotas were not satisfactory.

MEMORANDUM FOR THE HONORABLE WILLIAM F. GOROG

FROM : Frederick B. Dent 

SUBJECT: Steel Decision Memorandum

Attached is a decision memorandum for the President on the specialty steel import case reflecting the Trade Policy Committee meeting on February 27.

If the President makes his decision this week, it would enable us to consult with the major supplying countries, and with key industry and labor representatives, as well as with members of the Finance and Ways and Means Committees, before the decision becomes public. I would urge strongly that the issue be put before the President as soon as possible.

You may wish to transmit the attached memorandum to Bill Seidman and Bill Simon through secure limited-access channels, as they were both very interested in this matter.

You should note that the President's determination must be published in the Federal Register by March 16.

MEMORANDUM FOR THE PRESIDENT

FROM : Frederick B. Dent *F. B. Dent*

SUBJECT: Timetable for Recommended Steel Decision

If you choose Option III presented in the earlier memorandum, the following schedule would be likely:

- March 10 Presidential decision to seek orderly marketing agreements, and impose quotas for three years if agreements are not concluded by mid-June.
- March 10-15 Negotiations initiated by the Special Trade Representative with principal supplying countries.
- March 16 Presidential announcement that import relief is to be granted, that negotiations are in progress and quotas will be imposed if the negotiations fail, that imports are being monitored to detect disruption during the period of negotiations, and that any restrictions imposed will be lifted when the industry recovers or when a steel sector agreement is concluded in the Multilateral Trade Negotiations (MTN).
- STR, Commerce, and Labor consult with those in business, labor, and Congress directly interested in this decision.
- U.S. calls for consultations in OECD and urges priority treatment for a steel sector negotiation in the MTN.

THE WHITE HOUSE

WASHINGTON

March 9, 1976

MEETING WITH I. W. ABEL AND RICHARD SIMMONS

March 10, 1976

4:30 p.m.

The Oval Office

From: William F. Gorog *WFG*

I. PURPOSE

To allow Messrs. Able and Simmons to present their views in support of the U.S. International Tariff Commission (ITC), recommendation that five year quotas be placed on foreign specialty steel imports.

II. BACKGROUND, PARTICIPANTS, AND PRESS PLAN

- A. Background: Both labor and management are strongly united in support of maximum possible import relief and favor the ITC decision. Congressman Green, who is seeking Senator Scott's seat, is particularly vocal and is strategically situated as Chairman of the Trade Policy Subcommittee. A summary of the economic situation and your options are attached.

The specialty steel industry has urged the U.S. Government for many years to grant protection against import competition. Such pressure in 1971 led to negotiation of stainless steel subceilings under the steel voluntary restraint agreements (VRAs) with Japan and the European Community. Experience under those restraints indicates that Japan did not fill the levels allocated--probably due to high demand in other world markets--and that the EC probably exceeded the levels provided for under the VRA.

The domestic industry feels that it has followed the processes required by the Trade Act of 1974 and that foreign interests have had an opportunity to make their case and have lost. The industry feels, therefore, that it is entitled to relief. The principal objective of the industry appears to be a permanent international arrangement safeguarding against disruptive imports. Given the depressed level of activity and high levels of unemployment in the industry, it is expected that a decision to grant no relief

would be likely to be overridden by Congress thus implementing the ITC's proposed quantitative restrictions. Those restrictions are deficient in several respects and would have adverse effects on prices to consumers and on international relations (with Japan particularly).

- B. Participants: I. W. Able, President, United Steelworkers of America; Richard Simmons, President, Allegheny-Ludlam Steel Corporation; William F. Gorog
- C. Press Plan: David Kennerley

III. DISCUSSION POINTS

A. Economic Outlook

I am very pleased that both of you were able to come today and share your views on the specialty steel case with me.

I am interested in your assessment of the outlook for the specialty steel sector as the economy recovers.

Is the forecast for improvement likely to remove some of the economic problems which were at their height when ITC had the case before it last year?

Why is specialty steel so much more vulnerable to imports than some other products?

B. Impact on Trade Negotiations

I am also interested in your views on how import relief may affect our overall trade relations and pending trade negotiations. Specifically, what retaliatory action do you think is likely from Japan and European producers if we grant the type of relief recommended by the ITC? And do you see any prospect of negotiating an acceptable orderly marketing agreement in lieu of quotas or tariffs?

THE WHITE HOUSE

WASHINGTON

March 9, 1976

MEMORANDUM FOR THE PRESIDENT

FROM:

WILLIAM F. GOROG *WFG*

SUBJECT:

Summary of Specialty Steel Imports Case

Economic Background

Specialty steel imports total nearly \$200 million, doubling in value since 1970. They represent 5 percent of U.S. steel imports by value and 1 percent in tonnage. The U.S. specialty steel industry comprises 1.5 percent of domestic steel production. After doubling production and shipments since 1970, a 45 percent decline was experienced in 1975, in part caused by the recession. In 1975, about 8,500 persons, or about 25 percent of the work force, were laid off. Nineteen companies, with 40 plants (one-half in Pennsylvania) are affected.

Action by the International Trade Commission (ITC)

The ITC, in its first affirmative injury finding under the Trade Act of 1974, found serious injury and recommended imposition of 5-year quotas at 1974 levels. You must announce your intention by March 16. If you choose any form of quotas, tariffs, or a combination, they must be put into effect by March 31. If you seek negotiation of orderly marketing agreements, or an alternative form of relief, they must be in effect by June 14. Within 90 working days after the effective date of relief, both Houses, by simple majority, may override your action, in which case the ITC decision stands. There is no middle ground.

Presidential Options and Recommendations of the Trade Policy Committee

The Trade Policy Committee considered three options:

- (1) Deny relief on grounds of national economic interest and seek unilateral, voluntary restraint by foreign suppliers.
- (2) Impose import quotas for 1 or 2 years comparable to 1975 levels.
- (3) Announce, March 16:
 - Intention to impose 3-year quotas.
 - Initiative to seek orderly marketing agreements as a substitute for quotas.
 - Intention to terminate import relief by quotas or orderly marketing agreement if there are improvements in the industry's economic position based on advice from Secretaries of Labor and Commerce.

The Trade Policy Committee recommends Option 3. The State Department suggests a fourth option involving Option 3 but without announcement of final decision on the form of import relief action until June 14.

Considerations

Congressional interest and pressure is strongly in favor of the relief proposed by ITC and views this case as a test of Executive conformance to the spirit of the Trade Act of 1974. STR and the Trade Policy Committee believe that Congressional override is likely if your decision varies significantly from the ITC's.

A major consideration, however, is the nature and extent of possible foreign retaliation or U.S. payment of compensation resulting from action granting import relief. This can be avoided by attempts to negotiate orderly marketing agreements.

Timing is important. The object of a Presidential announcement on March 16 should be to avoid sharp criticism of alleged Administration foot dragging which might lead to politically motivated rejection of your final decision. Also, a decision in advance of March 16 would permit consultations with affected foreign governments such as Japan and the European Community.

THE WHITE HOUSE

WASHINGTON

March 10, 1976

MEETING WITH CONGRESSIONAL DELEGATES ON SPECIALTY STEEL

March 11, 1976

9:30 a.m.

Cabinet Room

From: William F. Gorog *wfg*

I. PURPOSE

To allow concerned Members of Congress to present their views in support of the U.S. International Tariff Commission (ITC), recommendation that five year quotas be placed on foreign specialty steel imports.

II. BACKGROUND, PARTICIPANTS, AND PRESS PLAN

- A. Background: Labor, management, and many Members of Congress are strongly united in support of maximum possible import relief and favor the ITC decision. A summary of the economic situation and your options are attached. at Tab A.

The specialty steel industry has urged the U.S. Government for many years to grant protection against import competition. Such pressure in 1971 led to negotiation of stainless steel subceilings under the steel voluntary restraint agreements (VRAs) with Japan and the European Community. Experience under those restraints indicates that Japan did not fill the levels allocated--probably due to high demand in other world markets--and that the EC probably exceeded the levels provided for under the VRA.

The domestic industry feels that it has followed the processes required by the Trade Act of 1974 and that foreign interests have had an opportunity to make their case and have lost. The industry feels, therefore, that it is entitled to relief. The principal objective of the industry appears to be a permanent international arrangement safeguarding against disruptive imports. Given the depressed level of activity and high levels of unemployment in the industry, it is expected that a decision to

grant no relief would be likely to be overridden by Congress thus implementing the ITC's proposed quantitative restrictions. Those restrictions are deficient in several respects and would have adverse effects on prices to consumers and on international relations (with Japan particularly).

The import problem of the U.S. specialty steel industry is to some extent a result of foreign government and business practices quite different from those followed in the United States, which involve ownership, subsidies, and financing assistance. These practices reflect a philosophy of maintaining employment levels (and thus production levels) during a recession so that excess supplies flow into world markets at very competitive prices. In the United States, producers cut back production and employment levels during a recession and laid-off workers receive unemployment benefits.

The variety of methods of support provided and the indirect and frequently temporary nature of such support, makes it extremely difficult for the domestic industry to pursue remedies under other provisions of the Trade Act (such as the countervailing duty law). The time required for investigations under such provisions (e.g., normally one-year in counter-vail cases) also appears to be unreasonable in light of ITC's findings that the industry already has suffered injury due to increased imports.

- B. Participants: Attached at Tab B.
- C. Press Plan: White House Photo Opportunity.

III. DISCUSSION POINTS

A. Economic Outlook

I am very pleased that all of you were able to come today and share your view on the specialty steel case with me.

I am interested in your assessment of the outlook for specialty steel and other industry in your districts and states as the economy recovers.

Is economic recovery likely to remove some of the problems which were at their height when ITC had the the case before it last year?

B. Foreign Subsidies and Preference

What are the factors that make specialty steel so much more vulnerable to imports than some other products? What are the longer range implications for world trade and U.S. industry in terms of possible retaliations if we consistently seek import relief from products enjoying foreign government support?

C. Impact on Trade Negotiations

I am also interested in your view on how import relief may affect our overall trade relations and pending trade negotiations. Specifically, how will we handle any retaliatory action from Japan and European producers if we grant the type of relief recommended by the ITC? Do you see any prospect of negotiating an acceptable orderly marketing agreement in lieu of quotas or tariffs?

THE WHITE HOUSE

By HR NASA Date 9/11/12

THE WHITE HOUSE

WASHINGTON

CONFIDENTIAL - GDS

MEMORANDUM FOR: THE PRESIDENT
FROM: BRENT SCOWCROFT 
SUBJECT: Specialty Steel Import Case

In my memorandum of March 3 (Tab B), I proposed a modification of Fred Dent's preferred option (Option III) for dealing with the specialty steel import case. I supported Fred on the need to negotiate Orderly Marketing Agreements (OMA) with our trading partners. I suggested, however, that in the initial announcement of your response to the ITC finding you not specify the exact type of import relief you would adopt should the OMA negotiations fail. This would preserve your flexibility and avoid forcing our partners to negotiate under threat.

This option (summarized in State's memorandum at Tab A) was discussed at an EPB/NSC meeting on March 8. It is now supported by Treasury (Dixon), CEA (MacAvoy), OMB (O'Neill), and State (Ingersoll). I have not been able to reach Elliott Richardson or Jim Baker at Commerce, although Baker, as well as Bill Usery, supported Dent's Option III at the EPB/NSC meeting.

Fred Dent believes that while my suggested alternative would be an improvement over Options I and II in his memorandum, it carries a substantial risk of override and could thus result in imposition of the ITC's recommended quotas for five years. He points out that the specialty steel people have served notice of their intention to press for a Congressional override unless they are satisfied with your announcement.

I fully recognize the risk of override should the specialty steel industry persuade the Congress that your response to the ITC decision is unsatisfactory. You can, however, assure the industry that by not specifying the exact type of import relief you would adopt should these negotiations fail, you would have the best chance of negotiating a favorable OMA. Forcing our trading partners to negotiation under duress would impair our ability to achieve an acceptable agreement.

CONFIDENTIAL - GDS

KR 5/11/88

You can also assure the industry that you will consult with them throughout the negotiations, and that you will act firmly if you cannot negotiate a favorable agreement.

RECOMMENDATION

That in your announcement responding to the ITC decision you state your intention:

--to seek Orderly Marketing Agreements on specialty steel within the next 90 days; and

--to provide import relief for the US specialty steel industry should these negotiations fail, but not specify in advance the type of import relief you would adopt in case of failure.

THE WHITE HOUSE

WASHINGTON

March 11, 1976

MEMORANDUM TO

THE PRESIDENT

FROM

ROGERS C. B. MORTON *RCBM*

SUBJECT

SPECIALTY STEEL IMPORT CASE

Although I appreciate State's position and the interests of those who now have shifted their support to State in trying to avoid announcement of quotas in your decision, I believe that route will end in a Congressional override. Your ability to avoid that override is minimal at best, so it is my strong feeling that unless the original option 3 by Fred Dent is chosen, we will end up with the five year quota situation. To assume that those with whom we will be negotiating will be more willing to negotiate in the absence of any quota language when they know full well the five year quota option hangs over their heads, is not being very realistic.

DEPARTMENT OF STATE

Washington, D.C. 20520

CONFIDENTIAL

MEMORANDUM FOR MR. BRENT SCOWCROFT
THE WHITE HOUSE

Subject: Specialty Steel

At the Monday, March 8 EPB/NSC meeting you asked the Department of State to set out in writing its views concerning a further alternative for handling the specialty steel issue. That alternative, which in essence is a modification of the "orderly marketing agreement" approach suggested by Ambassador Dent, is as follows:

- On March 16, the President would announce his intention to provide import relief for the U.S. specialty steel industry.
- He would state that, in accordance with the provisions of the Trade Act, the United States Government would seek during the following 90 days to negotiate orderly marketing agreements without specifying in advance the content or the duration of these agreements.
- There would be no advance proclamation of quotas or any other specific indication of the import relief he would adopt should these negotiations fail.
- In order to reduce the risk of a damaging trade war, we would have prior consultations with our major trading partners.

DECLASSIFIED

E.O. 12958, Sec. 3.4

CONFIDENTIAL

GDS

MR 92-24, # 23, State Ltr. 1/5/93

By KSH NARA, Date 2/3/93

CONFIDENTIAL

-2-

I believe this approach would provide the President with additional time and flexibility in which to develop a managed solution to the steel problem. It would avoid locking him into a rigid course of action. It also eliminates the element of duress arising from an advance proclamation of the quotas which will be imposed unless agreements are reached.

George S. Springsteen
Executive Secretary

CONFIDENTIAL

THE WHITE HOUSE
WASHINGTON

MEMORANDUM FOR: JAMES CONNOR
FROM: BRENT SCOWCROFT
SUBJECT: Specialty Steel Import Case

I concur with Fred Dent's recommendation to the President on the specialty steel import case, subject to one important reservation. I strongly urge that the President's announcement be modified to take into account my concern that we not unnecessarily limit the President's flexibility and complicate our negotiations by committing ourselves to specific actions if we are unable to reach satisfactory Orderly Marketing Agreements.

Option 3, as currently framed, recommends that the President:

- Proclaim important quotas, effective in 90 days, for a period of three years;
- State that he will seek to negotiate Orderly Marketing Arrangements during the 90-day period; and
- Note that he can reduce or terminate the quotas if the economic position of the domestic industry improves.

I urge that the President instead:

- Announce his intention to seek Orderly Marketing Agreements with exporting countries over a 90-day period; and
- State firmly that in the absence of a satisfactory agreement he will provide import relief at the end of that period.

The difference is that by not announcing in advance specifically what import relief he would provide, the President would:

- Remove the element of duress which specific threats would bring to the negotiations yet put the exporting nations on notice that we will take corrective measures if no agreement is reached.
- Maintain through the period of the negotiations his flexibility as to form of relief.

The third element of Fred Dent's recommendation, that the President announce that the remedy could be reduced or terminated depending upon developments, would be included in a Presidential statement announcing the imposition of quotas should negotiations fail.

I realize that this modified option may not be as satisfactory to the steel industry and to the Congress as would the original. It is vital to our relations with our industrialized allies, however, that we maintain the spirit of consultation which we have so carefully nurtured, and I think we can make a strong defense of my recommendation to Congress and the industry. Assuming the President would wish his advisors to speak to the steel industries, an effective argument could be made to them that the President:

- was indeed firmly committed to impose significant remedies if satisfactory OMAs could not be reached; and
- was not asking the industry to commit itself in advance, since Congress would still have the opportunity to override if the OMAs or quotas were not satisfactory.

WASHINGTON

March 11, 1976

MEMORANDUM FOR: JIM CONNOR
FROM: JACK MARSH *Marsh*
SUBJECT: Specialty Steel Import Case

I have reviewed the attached but do not desire to change my original position. (*option III of original*)

Many thanks.

Sent memo).

Friedenof agrees —

THE WHITE HOUSE

WASHINGTON

CONFIDENTIAL - GDS

MEMORANDUM FOR: THE PRESIDENT
FROM: BRENT SCOWCROFT 
SUBJECT: Specialty Steel Import Case

In my memorandum of March 3 (Tab B), I proposed a modification of Fred Dent's preferred option (Option III) for dealing with the specialty steel import case. I supported Fred on the need to negotiate Orderly Marketing Agreements (OMA) with our trading partners. I suggested, however, that in the initial announcement of your response to the ITC finding you not specify the exact type of import relief you would adopt should the OMA negotiations fail. This would preserve your flexibility and avoid forcing our partners to negotiate under threat.

This option (summarized in State's memorandum at Tab A) was discussed at an EPB/NSC meeting on March 8. It is now supported by Treasury (Dixon), CEA (MacAvoy), OMB (O'Neill), and State (Ingersoll). I have not been able to reach Elliott Richardson or Jim Baker at Commerce, although Baker, as well as Bill Usery, supported Dent's Option III at the EPB/NSC meeting.

Fred Dent believes that while my suggested alternative would be an improvement over Options I and II in his memorandum, it carries a substantial risk of override and could thus result in imposition of the ITC's recommended quotas for five years. He points out that the specialty steel people have served notice of their intention to press for a Congressional override unless they are satisfied with your announcement.

I fully recognize the risk of override should the specialty steel industry persuade the Congress that your response to the ITC decision is unsatisfactory. You can, however, assure the industry that by not specifying the exact type of import relief you would adopt should these negotiations fail, you would have the best chance of negotiating a favorable OMA. Forcing our trading partners to negotiation under duress would impair our ability to achieve an acceptable agreement.

CONFIDENTIAL - GDS

KR 5/11/86

You can also assure the industry that you will consult with them throughout the negotiations, and that you will act firmly if you cannot negotiate a favorable agreement.

RECOMMENDATION

That in your announcement responding to the ITC decision you state your intention:

--to seek Orderly Marketing Agreements on specialty steel within the next 90 days; and

--to provide import relief for the US specialty steel industry should these negotiations fail, but not specify in advance the type of import relief you would adopt in case of failure.

DEPARTMENT OF STATE

Washington, D.C. 20520

CONFIDENTIAL

MEMORANDUM FOR MR. BRENT SCOWCROFT
THE WHITE HOUSE

Subject: Specialty Steel

At the Monday, March 8 EPB/NSC meeting you asked the Department of State to set out in writing its views concerning a further alternative for handling the specialty steel issue. That alternative, which in essence is a modification of the "orderly marketing agreement" approach suggested by Ambassador Dent, is as follows:

- On March 16, the President would announce his intention to provide import relief for the U.S. specialty steel industry.
- He would state that, in accordance with the provisions of the Trade Act, the United States Government would seek during the following 90 days to negotiate orderly marketing agreements without specifying in advance the content or the duration of these agreements.
- There would be no advance proclamation of quotas or any other specific indication of the import relief he would adopt should these negotiations fail.
- In order to reduce the risk of a damaging trade war, we would have prior consultations with our major trading partners.

DECLASSIFIED

EO 13526, 13527, 13528, 13529, 13530, 13531, 13532, 13533

CONFIDENTIAL

GDS

By HR Date 9/11/12

~~CONFIDENTIAL~~

-2-

I believe this approach would provide the President with additional time and flexibility in which to develop a managed solution to the steel problem. It would avoid locking him into a rigid course of action. It also eliminates the element of duress arising from an advance proclamation of the quotas which will be imposed unless agreements are reached.

George S. Springsteen
Executive Secretary

~~CONFIDENTIAL~~

MEMORANDUM FOR: JAMES CONNOR
FROM: BRENT SCOWCROFT
SUBJECT: Specialty Steel Import Case

I concur with Fred Dent's recommendation to the President on the specialty steel import case, subject to one important reservation. I strongly urge that the President's announcement be modified to take into account my concern that we not unnecessarily limit the President's flexibility and complicate our negotiations by committing ourselves to specific actions if we are unable to reach satisfactory Orderly Marketing Agreements.

Option 3, as currently framed, recommends that the President:

- Proclaim important quotas, effective in 90 days, for a period of

during the 90-day period; and
- Note that he can reduce or terminate the quotas if the economic position of the domestic industry improves.

I urge that the President instead:

- Announce his intention to seek Orderly Marketing Agreements with exporting countries over a 90-day period; and
- State firmly that in the absence of a satisfactory agreement he will provide import relief at the end of that period.

The difference is that by not announcing in advance specifically what import relief he would provide, the President would:

- Remove the element of duress which specific threats would bring to the negotiations yet put the exporting nations on notice that we will take corrective measures if no agreement is reached.
- Maintain through the period of the negotiations his flexibility as to form of relief.

The third element of Fred Dent's recommendation, that the President announce that the remedy could be reduced or terminated depending upon developments, would be included in a Presidential statement announcing the imposition of quotas should negotiations fail.

I realize that this modified option may not be as satisfactory to the steel industry and to the Congress as would the original. It is vital to our relations with our industrialized allies, however, that we maintain the spirit of consultation which we have so carefully nurtured, and I think we can make a strong defense of my recommendation to Congress and the industry. Assuming the President would wish his advisors to speak to the steel industries, an effective argument could be made to them that the President:

- was indeed firmly committed to impose significant remedies if satisfactory OMAs could not be reached; and
- was not asking the industry to commit itself in advance, since Congress would still have the opportunity to override if the OMAs or quotas were not satisfactory.

March 4, 1976

MEMORANDUM FOR: JIM CONNOR *JMC*
THROUGH: JIM CANNON
FROM: PAUL LEACH *PL*
SUBJECT: Specialty Steel
Import Case

Based on the information available, I would recommend option III as the least objectionable alternative, given the apparent economic and political realities of the situation.

It is troubling to note, however, that Attachment D - "Specialty Steel Case Background" indicates that "the specialty steel industry is suffering to a large extent from the domestic recession." Thus, it appears that the industry suffers primarily from cyclicalities, not imports. This certainly throws into substantial question the USITC finding that the industry was seriously injured substantially due to increased imports.

- 2 -

I am setting forth below for your decision the options recommended by one or more agencies that participate in the Trade Policy Committee (see Attachment B for list of members) at a meeting held on February 27, 1976. This committee has the statutory responsibility to make recommendations to you on import relief actions that you may take. No agency recommended that you impose the USITC's suggested remedy of quotas for five years.

OPTION I: Deny relief on grounds of national economic interest, and seek unilatera, voluntary restraint on the part of foreign suppliers.

This option is proposed by the State Department. It is strongly opposed by the Justice Department. While this option may have the least impact on international trade relations, it is the consensus of the Trade Policy Committee that it will be overridden by the Congress, causing the imposition of the USITC's five years of relief.

OPTION I: Approve _____ Disapprove _____

OPTION II. Impose import quotas for basically two years, comparable to the overall level reached in 1975.

The State Department recommends that, if Option I is not accepted, relief be provided for one year, with an automatic extension for a second year if conditions in the industry have not improved, and with a possible third year of relief provided, if it is determined at that time that conditions still have not improved. (Under the Trade Act, the President does have the authority, after seeking USITC advice, to extend relief for a maximum of an additional three years beyond the relief initially provided.) This option is proposed in view of the cyclical nature of the problem faced by the industry, and the impact on our international economic relations of a longer period of relief. The consensus of the other agencies is that while relief is warranted only for less than five years, there is an unacceptably high risk that limiting relief to a much shorter and indefinite period would be overridden by the Congress, resulting in mandatory imposition of the USITC quota relief for five years.

OPTION II: Aprove _____ Disapprove _____

Alan Wm. Wolff
General Counsel

Trade Policy Committee

The Trade Policy Committee is established by Section 242 of the Trade Expansion Act of 1962, as amended. Its membership is designated by Executive Order 11846 of March 27, 1975. These members are:

- (1) The Special Representative, Chairman
- (2) The Secretary of State
- (3) The Secretary of the Treasury
- (4) The Secretary of Defense
- (5) The Attorney General
- (6) The Secretary of the Interior
- (7) The Secretary of Agriculture
- (8) The Secretary of Commerce
- (9) The Secretary of Labor
- (10) The Assistant to the President for Economic Affairs.

Pursuant to the Trade Expansion Act the Trade Policy Committee is required to make recommendations to the President as to what action, if any, he should take on reports with respect to import relief submitted to him by the U.S. International Trade Commission.

~~CONFIDENTIAL~~

THE WHITE HOUSE
WASHINGTON

March 2, 1976

MEMORANDUM FOR RICHARD CHENEY

FROM: WILLIAM F. GOROG *WFG*
SUBJECT: Steel Decision Memorandum

We have just received a recommendation on the ITC specialty steel case from STR with a Presidential option paper outlining the position of the Trade Policy Committee.

Since the Committee position represents the views of STR, State, Treasury, Defense, the Attorney General, Interior, Agriculture, Commerce, Labor, CEA, OMB, and the Assistant to the President for Economic Affairs, I would suggest limited additional staffing to include Messrs. Marsh, Buchen, Cannon, and Morton.

I feel that the recommended option is excellent. It should

1. Satisfy the industry and labor (Bill Uesery concurs);
2. It provides the alternative of establishing orderly marketing arrangements;
3. It provides an "out" in event that U.S. industry recovers faster than the three year period. This should relieve the fears of our trading partners.

Fred Dent has asked for expeditious review by staff to put this issue before the President as soon as possible.
