  - A new high of \$4.41 billion in Automobile Credit Extensions.
  - A 3.0 percent rebound to \$8.05 billion in "All Other" Installment Credit Extended.
- Liquidations of Installment Credit gained 2.3 percent to \$14.40 billion as new highs were recorded in liquidations of automobile credit and bank revolving credit.

NOTE: The former term "repayments" has been replaced by the more comprehensive term "liquidations," although no change is reflected in the data.

\* Preliminary estimate

- Fiscal 1975 saw social welfare expenditures under public programs increase \$21 billion, or 8 percent, in real terms (1975 dollars) over 1974.
- The 20-percent increase in current dollars was the greatest annual increase since the immediate post-World War II years when veterans benefits underwent great expansion.
- Adjusting for population and price changes, the real increase in per capita expenditures was 7.1 percent, compared with 1.9 percent the year before; and an average annual increase of 5.9 percent since 1950.
- Two major factors responsible for the increase in expenditures were the downturn in the economy, resulting in greatly expanded benefits to the unemployed and the needy; and the continuing high rate of inflation, triggering cost-of-living adjustments in cash benefit programs and a greatly swelled cost of furnishing medical and other social services.

- The enormous and growing preponderance of social insurance programs among social welfare expenditures is evident.
- In 1950 expenditures for social insurance programs accounted for about one-fifth (\$4.9 billion) of a \$23.5 billion total; by 1975, more than two-fifths of a \$286.5 billion annual outlay.
- The major impetus in the growth of social insurance has been the OASDHI Program.
- In 1950 expenditures under this program, then consisting solely of cash benefits, accounted for about \$1 out of every \$6 expended under social insurance. By 1975 the ratio had become almost \$4 out of \$6.
- In fact, OASDHI accounted for 27 percent of all social welfare expenditures in 1975 compared with 3 percent in 1950.
- Public aid expenditures made up 11 percent of the total in 1950 and 14 percent in 1975.
- The proportion of total social welfare expenditures that went for public aid declined steadily from 1950 through the early 1960's before the trend was reversed with the introduction of Medicaid, expansion of work and training and antipoverty programs, growth of the food stamp program, and, most recently, launching the SSI program.

# C.1 - Social Welfare Expenditures Under Public Programs as Percent of Gross National Product: Selected Fiscal Years 1929 to 1975

16 February 1976

- As a proportion of the Gross National Product, social welfare expenditures equaled 20.1 percent in Fiscal 1975, up by more than 2 percentage points from 1974.
- A contributing factor to the unusually large increase was the slower growth in GNP at a time when inflationary factors continued to affect social welfare spending.
- With private spending included, the grand total for social welfare expenditures reached \$389 billion in Fiscal 1975, or 27 percent of GNP.
- The growth in total public social welfare expenditures has been paralleled by the increasing use of Federal sources to fund the programs.
- From 1950 to 1965 this proportion increased from 45 to 49 percent, and by 1975 it had reached 58 percent.
- An important element in this increase has been the growing role of the Federal Government in providing health services (including Medicare, Medicaid, and other services).
- Through 1965 the Federal Government was financing less than half the public bill for health. By 1975 the Federal share was more than two-thirds.

February 1976

- The increase in Federal expenditures for social welfare is reflected also in the relationship between such expenditures and total Federal Government expenditures.
- In 1950 social welfare spending accounted for 26 percent of all government spending at the Federal level. By 1965 this ratio had crept up to 33 percent, and reached 55 percent in 1975.
- During the same period State and local spending for social welfare showed relatively little growth as a proportion of total spending at that level, fluctuating between 55 and 64 percent.
