Office of the Secretary of the Treasury October 6, 1975 Office of Tax Analysis

NOTE: While some rates are increased in the higher brackets, taxpayers with income taxed in those brackets will benefit from rate reductions in the lower brackets and the increase in the personal exemption so that on balance the tax cut proposals will reduce taxes even for those affected by the increased rates.

While some rates are increased in the higher brackets, NOTE: taxpayers with income taxed in those brackets will benefit from rate reductions in the lower brackets and the increase in the personal exemption so that on balance the tax cut proposals will reduce taxes even for those affected by the increased rates.

ANNEX 6

SIX-POINT UTILITIES PACKAGE

- -- Increase the investment tax credit permanently to 12 percent on all electric utility property except generating facilities fueled by petroleum products. No change of the percent-of-tax limitation is involved. The increase in the credit is allowable only if construction work in progress is included in the utility's rate base and the benefit of the increase is "normalized" for ratemaking purposes. "Normalized" in this sense means reflecting the tax benefit for ratemaking purposes pro rate over the life of the asset which generates the benefit instead of recognizing the entire tax benefit in the year the utility's taxes are actually reduced. In the absence of normalization, the entire tax benefit would flow through immediately in the form of reduced utility rates for consumers, and no real economic benefit would result for the utility.
- -- Give electric utilities full, immediate investment tax credit on progress payments for construction of property that takes two years or more to build, except generating facilities fueled by petroleum products, without regard to the five-year phase-in required by the Tax Reduction Act of 1975. This new provision applies only if the regulatory agency includes construction work in progress in the utility's rate base for ratemaking purposes.
- -- Extend to January 1, 1981, the period during which pollution control facilities installed in a pre-1969 plant or facility may qualify for rapid five-year straight-line amortization in lieu of normal depreciation and the investment credit.
- -- Permit rapid five-year amortization of the costs of either converting a generating facility fueled by petroleum products into a facility not fueled by petroleum products or replacing a petroleum-fueled facility with one not fueled by petroleum. This amortization is in lieu of normal

depreciation and the investment credit, and is available only if (i) its benefits are "normalized" for ratemaking purposes, and (ii) construction work in progress is included in the utility's rate base for ratemaking purposes.

-- Permit a utility to elect to begin depreciation, during the construction period, of accumulated construction progress expenditures, generally the same expenditures as those which qualify for the investment credit construction progress payments under the Tax Reduction Act of 1975. Any depreciation taken during the construction period will reduce the depreciation deductions available after the property is completed. This early depreciation will be available only if the ratemaking commission includes construction work in progress in the utility's rate base and "normalizes" the tax benefits for ratemaking purposes. Construction of generating facilities which will be fueled by petroleum products will not qualify for such depreciation.

-- Permit a shareholder of a regulated public electric utility to postpone tax on dividends paid by the utility on its common stock by electing to take additional common stock of the utility in lieu of cash dividends. The receipt of the stock dividend will not be taxed. The amount of the dividend will be taxed as ordinary income when the shareholder sells the dividend stock and the amount of capital gain realized on the sale will be decreased (or the amount of capital loss increased) accordingly. Dividend stock is deemed sold before other stock.

FY 1976 COST = \$600 million

Annex D

MAJOR 1975 INDIVIDUAL TAX REDUCTIONS

The Tax Reduction Act of 1975 contains three temporary general individual tax cut provisions affecting most taxpayers. The first was the temporary one-shot rebate of a portion of 1974 tax liabilities, which was implemented through special rebate checks or larger refund checks last spring (cost: \$8.1 billion). Two other temporary structural changes enacted in 1975 may be summarized as follows:

Standard deduction liberalization

- -- minimum standard deduction (low income allowance) increased from \$1,300 per return (\$650 for married persons filing separately) to \$1,900 for a joint return or surviving spouse, \$1,600 for single persons, and \$950 for married persons filing separately,
- -- maximum standard deduction increased from 15 percent of AGI (with a maximum of \$2,000 or \$1,000 for a married person filing separately) to 16 percent of AGI (with a maximum of \$2,600 for a joint return or surviving spouse, \$2,300 for a single person, and \$1,300 for married persons filing separately,

-- effective for one year (generally 1975 calendar year)

COST: \$2.5 billion

Personal exemption tax credit

new \$30 per exemption tax credit (except blind and aged exemptions) in addition to present law personal exemptions
effective for one year (generally 1975 calendar year)

COST: \$5.3 billion

The approximate \$8 billion of tax reductions effected by the standard deduction liberalization and the personal exemption tax cut were reflected in withholding tax reduction over a eight-month period. Thus, the amount of tax cuts necessary to annualize the 1975 Act withholding tax reductions over a 12-month period would be approximately \$12 billion.
